**Objective**

The primary objective of this course is to introduce the student(s) to the practical/hands-on approach to anesthesiology with emphasis on airway management, respiratory physiology, cardiovascular physiology, perioperative management, and invasive procedures.

Medical students are expected to make preoperative rounds with the anesthesiology staff on patients scheduled for surgery. Preoperative examinations and assessments of patients.

It is the students' responsibility to verify where and to whom they report before the start of each course no later than the Friday before the start of the rotation.
are expected. Participation in the decisions of anesthetic drugs and anesthesia choice are required. Students will assist in the preparation of the patients for surgery which include starting IV's, connecting monitoring equipment, learning the pharmacology of various anesthetic agents, and learn to problem solve basic anesthetic situations. Emphasis on airway management include placement of LMAs, LTDs, masking patients, and intubation via direct laryngoscopy and video laryngoscopy. Invasive procedures include arterial line insertions and central line placement. An introduction to peripheral regional blocks will be included for those students that express an interest. Students will follow their patients throughout the anesthetic care into the postoperative recovery for continuity of care.

The course is directed towards medical students who plan to enter Anesthesiology, Critical Care Medicine, or Emergency Medicine. The course emphasis will be tailored to the medical specialty the extern expects to enter and the skill set of the student. Excellent hand-eye coordination is a must for this course, since students are expected to perform procedures on patients.
Evaluations

Oral, practical, and/or written evaluations of medical students will include clinical performance, medical knowledge, professionalism, motivation, and ability to problem solve.

This course is designed to provide senior students with the opportunity to perform an in-depth study of anatomy in relation to surgical fields and other clinically relevant disciplines such as radiology and emergency medicine. It enables students to master the delicate relationships of anatomical structures through supervised step-by-step dissections. It is expected that prospective students will be able to correlate structural organization of human body to the interpretation of disease processes. Students will be able to participate in teaching anatomy to junior medical students in an interactive laboratory environment.

Evaluation
Evaluation is based on completion of the assigned dissection and active participation in anatomy laboratory teaching. Minimum of 5 PowerPoint presentations detailing a series of clinical vignettes with complete history, laboratory values, differential diagnosis and discussions are required. These vignettes must emphasize the importance of structural relationships of the affected organs and the anatomic basis of the conditions discussed.

Students should contact Dr. Arslan to receive permission in advance and to insure proper coordination.

Orhan E. Arslan, DVM, PhD
Director of Anatomy
Department of Pathology and Cell Biology

Track

Required for Radiology
One of the options for Emergency Medicine, and Family Medicine

Note: This course is also listed under Internal Medicine.
Drs. Nagwa Dajani and James Mayer

This elective is not available to visiting students.
The goals of this course are to review various aspects of basic anatomy, physiology, pathology, and genetics that are found within the daily clinical care setting. Students will be asked to provide a summary power point presentation based on a clinical patient management topic. The topic will focus on the underlying fundamental basic science knowledge and skills required to fully utilize the clinical decision making process. This course will be held over a two week period. It will be approved first for those students designated on the Ob/Gyn track and then be available to a limited number of students on a first come, first serve basis.
**MDE 8381:**
Pharmacogenomics and Psychosocial Aspects of Patient Care

Drs. Lynn Wecker PhD and Michelle Mattingly PhD

Understanding the basis for differences in both drug responses and psychosocial therapies forms the basis for treatment selection in psychiatric disorders. This course will explore and expand knowledge and applications of (a) why specific medications may have either a therapeutic benefit treatment emergent adverse effect for some, but not all individuals; (b) genetic polymorphism of neurotransmitter-associated proteins including enzymes, transporters and receptors that mediate chemical neurotransmission, and the possible role of these alterations in the manifestation of behavioral disorders; (c) how psychosocial factors influence the manifestation of both positive and negative health-related behaviors; and (d) the utility of empathy with patients and its impact on differential therapeutics inclusive of integrating pharmacotherapy and psychotherapy in optimal care.

| 10A, 10B | Year 4 status | 2-6@USFMS | FT, 40 hr wk | 2 |
**Goals and Objectives**

The goals and objectives of this course are to complement the basic and clinical information gained during their first three years of medical school and provide students a solid understanding of both pharmacogenomics and the behavioral aspects of patient care. Specifically, Pharmacogenomics and Psychosocial Aspects of Patient Care is designed (a) to provide an understanding of the interactions between genetic inheritance, drug actions, and the body’s response to drugs; and, (b) to expand on personalized medicine and patient centered care that were previously learned or encountered by the medical student during the first three years in medical school. A working knowledge that psychiatric treatments (either psychopharmacological or psychosocial) can be tailored made and adapted to the individual is essential as these issues have implications for patient health, adherence to treatment and patient-physician relationship.
Teaching faculty
USF faculty of Psychiatry

Evaluation
Students will be evaluated based on faculty evaluation of interaction, participation, and presentation on a current issue in pharmacogenomics.

Track
One of the options for Emergency Medicine, Family Medicine, Psychiatry, and Pediatrics

</table>

The course will demonstrate and enforce the interface between clinical and foundational science, and reinforce skills of literature review and mechanistic thinking about clinical problems. Specifically, students will review the anatomy of the head and neck through online materials, lectures, and dissection. Students will learn of common clinical correlates, imaging studies, and surgical procedures through lectures by clinical faculty.
Goals and Objectives

The overall goal of this course is to provide a thorough review of human head and neck anatomy from a clinical perspective. Topics covered during the elective will include anterior and posterior triangles of the neck, the larynx and pharynx, the face, the infratemporal fossa, the oral cavity and submandibular triangle, the eye and orbit, the ear, the cranial base, the blood supply and venous drainage of the brain, the cranial nerves, the meninges, and major gross brain structures. The objective is to enable students to recognize the anatomical background of common clinical problems and surgical procedures.

Teaching Faculty

Summer Decker, PhD and other USF Health faculty

Evaluation
Students will be evaluated on the basis of their course participation in discussions and dissection and on their oral presentation of a chosen and approved research project.

**Track**

Dr. Orhan E. Arslan, DVM, PhD

Students will review the anatomy of the back and extremities through the use of assigned online materials, lectures, and dissections. Students will learn of the clinical correlation, common imaging studies, and common surgical procedures of the musculoskeletal system.

**Goals and Objectives**
The overall goal of this course is to provide a thorough review of human osteology and musculoskeletal anatomy from a clinical perspective. The objective is to enable students to recognize the anatomical background of common clinical problems and surgical procedures. Specifically, the gross anatomy of the back and limbs will be reviewed, and the clinical relevance of this anatomy will be emphasized.

Teaching faculty

Summer Decker, PhD, and other USF Health faculty

Evaluation

Evaluation of the student’s final oral presentation with respect to:

- knowledge of the anatomical basis to clinical practice,
- the incorporation of the topic of basic sciences and the references cited

</table>
The course will provide a conceptual framework to think about brain disease following the National Institutes of Mental Health Strategic Plan agenda, seeking new ways of classifying psychopathology based on dimensions of observable behavior and neurobiologic measures. Specifically, this interdisciplinary course is designed to provide students with basic science lectures integrating state-of-the-art knowledge about how brain networks integrate into dimensions of behavior spanning the spectrum of health to disease, with the experimental and clinical application of therapeutic techniques (neurostimulation and optogenetics). Students will learn in depth about dynamic integration of networks and functional brain anatomy in week one, and about therapeutic and experimental applications in week two. Classroom lectures during the morning will be integrated with laboratory and neurotherapists’ clinic attendance in the afternoon. At the end of the course, all students will be required to present a small conceptual paper on a topic of their choice related to course materials.
Goals and Objectives

At the end of the course students will:

- Understand the concept of dimensions of behavior with different classes of variables (or units of analysis) including genes, molecules, cells, neural circuits, physiology, behaviors, and self-reports
- Describe the circuits that represent the core aspect of these classes of variables – as central to the various biological and behavioral levels of analysis
- Understand the selection, implementation and limitations of modern treatment modalities for brain disorders (neuromodulation and optogenetics)
- Integrate the basic science knowledge described with clinical applications and laboratory research problems
- Critically evaluate the pertinent literature to one topic of their choice and summarize it into a 20 minute conceptual presentation
Teaching Faculty

Dr. Patrick Marsh, Dr. Jamie Fernandez, Dr. Andrew Kozel, Dr. Lucia Alba-Ferrara, Dr. Sandra Stock

Evaluation

Students will be evaluated based on faculty evaluation of interaction, participation, peer evaluation, and a final scholarly project.

MDT 8200D:
Molecular Biology of Cancer and Personalized Cancer Care

Dr. Alberto Chiappori, MD

This course is designed to give students an appreciation for the relationship between basic science and clinical gastroenterology. It will focus on four major aspects:

- Goals and Objectives
  This course will address the relationship of innate and acquired immunity to the disordered immune response in inflammatory bowel disease, the brain

- Teaching faculty
  Drs. Joel Richter, MD, Jay Mamel, MD, Soojong Hong-Chae, MD, and Yasser Saloum, MD

- Evaluation
  Students will be evaluated based on direct faculty observation and feedback from patients and families during patient interactions, participation in conferences, and written assignments.

- Track
  One of the options for Emergency Medicine, Family Medicine, Internal Medicine, and Pediatrics
The course is a review of the signaling transduction pathway that in “recent” years have become relevant to the study, but most important to the treatment of cancer and are the basis for the new paradigm of personalized medicine in oncology that Moffitt is championing. Morning didactic lectures as well as journal club presentations and faculty case presentations will be held in the Moffitt FOB1 Conference Room. Laboratory and specialty outpatient clinic rotations will take place at their corresponding locations in the Moffitt Campus.

The course consists of:

- Basic science didactic lectures that describe the pathways and how they are relevant as targets to treat cancer (theory behind personalized medicine)
- Didactic lectures that review the methods to analyze those pathways like IHC, FISH, gene analysis (microarray, DNA sequencing), proteomics, etc...
- Rotations through some of the Moffitt laboratories to see first hand how these technologies work.
• Outpatient clinic rounds to see patients that are benefiting of the therapeutic options provided by these advances (practice and reality behind personalized medicine)
• Independent Research Project will consist of a project where the students will be first provided, in advance, seminal basic science articles as background references. Students will review the literature, identify, analyze and present clinical publications (minimum 2) relevant to the application of the personalized medicine concept to the care of the oncologic patient.
• Interactive case presentation where the Faculty will present real cases of their own practice where the students will be asked to evaluate the patient (decision making of diagnosis and treatment) with real time faculty feedback (labs, x rays, scans, path, molecular studies).
Goal and Objectives

The goal of this course is the re-introduction to the pathophysiology of common solid and hematologic malignancies with emphasis on the basic scientific foundations (molecular and technologic) currently available to better understand them and treat them. Clinical methods sessions are to complement the basic science review.

Teaching Faculty

Faculty at Moffitt Cancer Center and the USF Dept of Oncologic Science

Evaluation

Students will be evaluated on case presentations, journal club presentations, and interaction in clinic and didactic sessions.

Track

One of the options for Dermatology, Emergency Medicine, Family Medicine, Internal Medicine, and Pediatrics
Advanced Respiratory Pathophysiology
Dr. Kendall F. Morris, PhD

This course is specifically designed to enhance student competency in Respiratory Pathophysiology. It will provide an overview of key concepts and present the clinical significance of principles of pulmonary physiology. Particular emphasis will be placed on recent advances in the understanding of pulmonary physiology. The course consists of in-depth reading, didactic sessions and case scenario experience. Students will prepare and present a case report.

Goals and Objectives

The goal of the course is to provide a review of pulmonary physiology as applied to clinical scenarios. Topics will include but are not limited to Adult Respiratory Distress Syndrome (ARDS), asthma, hyperbaric medicine and airway inflammation.

Teaching faculty
Evalu ation

Students will be evaluated on oral presentations, application of the principles of pulmonary physiology to clinical scenarios, the incorporation of historical and recent basic science discovery in oral case reports, and the use of references and judgment of evidence in case reports.

Track

One of the options for Emergency Medicine, Family Medicine, and Pediatrics

</table>
This course is specifically designed to prepare students for surgical internship with a focus on the basic principles that must be mastered by all general surgeons and should be familiar to all medical doctors. It will provide an overview of the key concepts in anatomy and physiology that are fundamental to the care of surgical patients and the students' long term success as surgeons. The course consists of a one-month intensive reading, dissection and case scenario experience. This is a 4-week elective. Lectures will be given at the USF South Tampa Center, Tampa General Hospital, or the USF campus. Anatomic dissections will take place at the medical school gross anatomy lab.

**Goals and Objectives**

At the completion of the elective, students should be able to:
2. Have an advanced understanding of anatomy, histology, histopathology, and physiology of common surgical diseases.
3. Have a need for an understanding of the postoperative physiology.
5. Be able to recognize and test common physiological arrangements and complications at the postoperative stage.

Teaching Faculty
USF Health faculty

Evaluation
Students must successfully complete each component of the course in order to receive a passing grade for the course. Requirements include: Morbidity and Mortality Conference, Grand Rounds, orientation, weekly quizzes, pre-test and post-test, didactic lectures, anatomic dissections, and clinical case conferences.

Labratory - 10%
Performance - 10%
Research Project - 60%
Weekly Quiz - 20%
Post-test - 20%

Required for General Surgery and Surgery Subspecialties

MDT 8800: Neuroimmunology Component in Neurological Diseases
Drs. Marzena Wiranowska, PhD and Alfred T. Frontera, MD

10B, 11A Year 4 status No Limit@USFMS FT, 40-60 hr wk 2
This course is designed to demonstrate that most of the neurological diseases have an immune/inflammatory component, and the list of neurologic diseases in which the immune system plays an important role continues to grow. Because of the critical correlation between the nervous system and immune system, neurologists should be aware of neuroimmunologic principles, especially as immunologic therapeutic strategies are currently being tested in many neurologic disorders. The course will be a balance between basic science and clinical activities and include seminars, journal clubs, clinical correlation and paper presentations by the students selected from the ‘List of Major Topics’.

**Major Topics**
- Multiple Sclerosis (MS)
- Acute Disseminated Encephalomyelitis (ADEM)
- Neuromyelitis Optica (NMO)
- Myasthenia Gravis
- Acute Inflammatory Demyelinating Polyradiculoneuropathy (Guillain-Barré syndrome)
- Chronic Inflammatory Demyelinating Polyradiculoneuropathy (CIDP)
- Epilepsy (Mesial Temporal Sclerosis, see also paraneoplastic syndromes such as Anti-Voltage-Gated Potassium and anti-NMDA receptor antibody syndromes)
- Movement Disorders (Hashimoto’s encephalopathy, Parkinson’s Disease)
- Alzheimer Dementia
- AIDS Dementia
- CNS Immune Reconstitution Inflammatory Syndrome (IRIS)
- CNS infections e.g., meningitis, encephalitis
- Cerebrovascular Disease (e.g., Stroke, CNS Vasculitis)
- Primary CNS tumors
- Paraneoplastic Syndromes
- Prion Diseases (Creutzfeldt-Jakob Disease)
- Autism
Teaching Faculty

Alfred T. Frontera MD, Marzena Wiranowska, PhD, Tuan Vu, M.D, Laila Kazim, MD, Selim Benbadis, MD, Ali Bozorg, MD, Juan Sanchez, Ramos, MD, PhD, Robert Hauser, MD, W. Scott Burgin, MD, David Decker, MD, David Rose MD, and Frank Vrionis, MD, PhD, Michael Yu, MD, Nem Tran, MD, and Ed Pan, MD

Evaluation

Students will be evaluated based on punctuality of assignments, presentations, interactions with patients and staff, discussions, and a final product (oral or written presentation).

The major objective of this elective will be to teach the student to perform comprehensive cardiac assessment, emphasizing the physical examination. The course will utilize Harvey (the teaching manikin) and actual patients. This elective will be primarily a self-study course utilizing Harvey with a weekly lecture from a cardiologist to review the materials and a weekly quiz to assess the student’s progress in their self-study program. Time will also be devoted to acquiring fundamentals of ECG interpretation and exposure to utilization of exercise testing, echocardiography and cardiac catheterization. Attendance at cardiology teaching conferences is optional.

Course objectives will be assessed by the documentation of individual’s practice on the manikin as well as the three quizzes and a comprehensive written and practical examination at its conclusion.

Upon completion of this elective, the student will be able to conduct a full dermatologic examination and will be able to recognize and offer reasonable management for common dermatologic disorders, including those primary in the integument and those associated with systemic disease. Students will rotate throughout the elective at the USF Morsani Center, the James A. Haley VA Hospital, Moffitt Cancer Center, and other ancillary clinics. The student will attend various weekly conferences with the Dermatology residents.
Student progress and performance in the clinical setting will be evaluated by the faculty and residents.

Periods 2, 3 and 4 are reserved for students applying to dermatology residency programs.

| MEL 9999L: Independent Study in Dermatology & Cutaneous Surgery | Faculty | 1,2,3,4,5,6,7,8,10,11 | Year 4 status | no limit @USFMS | FT, 44 hr wk | 4 |
The course is designed to provide students interested in Dermatology as a career an opportunity to carry out an in-depth self study of a selected topic, with the goal of being co-author of a publication in a peer-reviewed journal. The course of study will be determined by the faculty member and student. Prior to scheduling the course, students must meet with their faculty mentor to determine the course of study. Independent reading and research is required, and assessment will be based on successful completion of a written paper or project.

This elective is NOT available to visiting students.

**MEL 7258: Elective in Rural or Underserved Medicine (AHEC)**
Faculty and Staff at Premier Community HealthCare Group (Dade City), Suncoast Community Health Care Centers (Ruskin, Dover, Plant City), Tampa Family Health Centers, Community Health Center of Pinellas, DelSoto Memorial Hospital (Arcadia), or Citrus County Health Department (Lecanto).

This elective rotation is designed to introduce the senior student to the unique characteristics of medical practice in a rural or underserved community. Students will be supervised by clinical family physician faculty and will gain a better understanding of providing care to a medically underserved population and the tremendous health needs that exist. Depending on the site selected, Gulfcoast North AHEC or Gulfcoast South AHEC may offer housing and/or a mileage stipend to students.
Goals and Objectives
1. Compare and contrast the advantages and problems in rural or underdeveloped areas.
2. Identify the unique propositions and challenges to make academic and life in a rural or urban community.
3. Introduce a researcher to the student to social issues in healthcare.
4. Understand and the mechanisms and distinctions for counting and referential in real or under events and practices
Evaluate the suitability of rural or underdeveloped practice, including availing of organized funds for particular care, medical care, etc.
At a certain location, sections or periods are available for daily practice with in the hospital, emergency department, and community.
Evaluation

The assigned faculty preceptor will provide an individual evaluation addressing the student's adaptability and understanding as well as knowledge, judgment, and rapport.

Availability

At certain sites this elective is available to USF students only. The Department of Family Medicine and Gulfcoast North AHEC or Gulfcoast South AHEC will make the final arrangements. Availability at all clinic sites is per the preceptor's approval.

MEL 7259: Emergency Medicine Elective
Emergency Room Faculty at Florida Hospital North Pinellas

Teaching will be done on a one-on-one basis. Students will be assigned to emergency room shifts in such a way that they experience emergency activities during the day, night, and weekends. Preceptors will be emergency room physicians also trained in primary care and family practice. If desired, students may accompany EMTs in ambulances.
In the emergency room, the student will initially assess each patient and propose treatment plans. The student may elect to follow the admitted ER patients throughout their hospital stay. Under the direct preceptor supervision, the student may perform simple procedures. These may include suturing, insertion of the catheters, IVs, injections, and others as appropriate.

Objectives

1. Develop competence in rapidly assessing ER patients.
2. Learn the initial management of common problems and local patients
3. Learn effective CPR
4. Recognize complications of medical care and drug side effects
5. Sentence to mental image of motor imagery through the stimulus with family member during a medical crisis.
9. Stimulate the student's interest in primary care and family medicine.

Evaluation

- Fund of medical knowledge
- Ability to apply this knowledge, clinical judgment, and common sense
- Enthusiasm, tenacity, professionalism, and idealism
- Student case log and case presentations
- Student's reading about selected emergency patients (selected by student)

Precceptor evaluations

MEL 7267: 
International Health Elective

<table>
<thead>
<tr>
<th>Year 4 status</th>
<th>4@EXT</th>
<th>45-50 hr wk</th>
</tr>
</thead>
</table>

Dr. Eduardo Gonzalez and Dr. Carlos Callegari

There are a wide variety of opportunities available for students with an interest in international health care. This elective is designed to provide support for USF students to obtain an international medical experience during their fourth year.

Experiences may include:
- Foreign travel and provision of medical services
- Academic study abroad (readings and lectures) on the health problems of a particular area
- Preparation and/or presentation of a report on the student's experience

**Objectives**

1. Identify the general and specific health care needs of a particular foreign country
2. Identify the role of the primary care physician in international health care
3. Gain additional clinical skills in the provision of primary health care

**Evaluation**

The student's evaluation will be individualized based on the format of his/her particular elective. The specific evaluation criteria will be decided in consultation with Dr. Gonzalez and/or Dr. Callegari prior to scheduling the elective.

**Course Requirements**

Any interested student MUST meet with Dr. Gonzalez and/or Dr. Callegari to plan the elective. Ideally, this should be done prior to the start of the fourth year.

Emergency medical insurance is required for all electives abroad.

---

MEL 7320F: 
Family Medicine Externship

| Year 4 status | no limit@ EXT | FT, 44 hr wk | 4 |

This externship is designed for students who wish to do a rotation out of state or at a site that is not affiliated with USF. §

For further information contact the Department of Family Medicine Education Coordinator at (813) 974-2445 or lgiordan@health.usf.edu.

MEL 8251: 
Acting Internship - Family Medicine

Faculty and Staff at Bayfront Medical Center and Morton Plant Mease Health Care

| Year 4 status | 1@BFMC, 1@MPMHC | FT, 50 hr wk | 4 |

Objectives

1. Integrate the student into the hospital team
services such that the student functions at the level of an intern, managing their own patients under the supervision of a senior resident. The intern then monitors the student's work closely.
pan in the assessment and plan for patients requiring hospitalization, to succinctly present the admission to the plan, and to effectively manage the patient's medical problems.
Responsibilities

The student is expected to function as a Family Medicine intern under the direct supervision of the senior resident and attending. This includes pre-rounding on their patients, writing SOAP notes, attending morning report and teaching rounds, writing orders, following up on labs/consults/imaging, and doing discharge planning. Overnight call is to be determined by the site of the AI.

Evaluation
Scheduling

To determine availability of elective space at Morton Plant Family Medicine Residency, contact Lee Blomberg at (727) 467-2517.

Housing may be available on a first-come, first-serve basis.

To reserve a space in this course at Bayfront Family Medicine Residency, students must contact the Coordinator at the Bayfront Family Health Center at (727) 893-6785.

Final arrangements concerning the course location/precceptor will be made by the Department of Family Medicine after the student is scheduled for the elective.

ONLY MPMHC IS AVAILABLE TO VISITING STUDENTS

1. Introduce student to the mission of Family Medicine in the medical community.
De move there location of a bullet car to hospital and the effectivization of others pecial outcomes.
improve the student's skills and clinical judgment by adopting and supervising student career experiences.
4. Demonstrate the organizational structure of a family medicine residency including goals of management, medical records, patient education, and prevention medicine.
Evalu
ation

The Family Medicine faculty will prepare a formal evaluation based on the following:

- Fund of medical knowledge
- Quality of assessment and presentation
- Clinical judgment as indicated by the rationale of diagnostic and management plans
- Attitude and rapport with patients and families
- Subjective elements of interpersonal relationships, motivation, and ability
Students must check with the Department of Family Medicine before scheduling this elective through the Registrar's Office. Students are then required to contact the residency site for final approval and any arrangements that need to be made. Students should not expect that living accommodations will be provided. Contact information can be obtained through the Family Medicine Education Coordinator at 974-2445 or lgiordan@health.usf.edu.

Months

Specific to each location

ONLY MPMHC IS AVAILABLE TO VISITING STUDENTS
Objective

Provide a learning experience for students who have a demonstrated interest in the health care of the underserved and other community health issues.

Description / Evaluation

Students will attend all PSMP clinics and post conferences at Judeo Christian Health Clinic and Brandon Outreach Clinic. When more junior students are present, the elective students will assume peer teaching roles. Students are also encouraged to attend similar free clinic sessions at other community sites pending approval of the course director. Other activities include: participation in the monthly Health Disparities Scholarly Concentration Journal club; and a written report of a topic or project related to public medicine. Students will be encouraged to develop projects worthy of publication or presentation at a scholarly meeting.

Availability: 2 at USF MS

| Year 4 status | 1,2,3,4,5,6,7,8,9,10,11 | 2@USFMC | FT, 44 hr wk | 2,4 |
The aim of this elective is to reintroduce students to primary care in a Family Medicine clinic. Students will be assigned to the USF Family Medicine clinic where they will be responsible for evaluating patients under the guidance of a faculty member. Emphasis will be on the patient as a person, and the application of knowledge of the effects of disease, lifestyle, family setting, and personality on the development and management of the patient's problems. Experience will be gained in the management of the wide range of problems present in family medicine. Students may also be assigned to work at JCHC and BORC in some rotations and precepting first and/or second year students.

Objectives
2. If the biological, psychological, and social factors that are relevant in the etiology of patients’ problems and integrative the facts in a treatment plan...
3. Improve problem-solving skills.

4. Study the role of other health professionals in patient care (consultants, social workers, nurses, practitioners, psychologists, etc.) and the laws so
4. The improvement of patient education and communication is an important skill.

5. Improvement of patient education and communication is an important skill.

**Evaluation**

Based on competence, consideration of patients, and practical approach to problems.

Final arrangements concerning course location/preceptor will be made by the Department of Family Medicine after the student receives his/her elective choice. Students are required to meet with Dr. Gonzalez one month prior to the start of the rotation to discuss this elective.
Contact

Education Coordinator  
– (813) 974-2445 or Igloridan@health.usf.edu

NOT AVAILABLE TO VISITING STUDENTS

MEL 8265:
Family Medicine Preceptorship
Community Clinical Faculty

During this elective students will accompany faculty members who are in private clinical practice. This experience will be primarily in the office but will include involvement in the care of the preceptor's patients in hospitals, nursing homes, and at home. Emphasis will be on the patient as a person and the application of knowledge of the effects of disease, lifestyle, family setting, and personality on the development and management of the patient's problems. Experience will be gained in the management of the wide range of problems that are present in family practice.

Objectives

1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11
Year 4 status  1 per period  FT, 44-50 hr/wk  2, 4
1. Identify and manage problems which present commonly in family practice, emphasizing the importance of continuity of care and follow-up.
2. Identify the biological, psychological, and social factors that are relevant to the etiology of patients' problems and integrate these factors in assessment planning.
I'm proposing problems solving study the role of other pathological strains, so social workers, nurses, patients, psychiatrists, etc., and
the relationship between them and the family physician.

**Evaluation**

Based on competence, consideration, and practical approach to problems, and a written report.

In order to determine availability, students are required to select and receive permission from a community preceptor prior to registering for this elective. Final arrangements concerning course location/preceptor will be made by the Department of Family Medicine after the student receives his/her elective choice.

**NOT AVAILABLE TO VISITING STUDENTS**
MEL 8272: Morton Plant Mease Women’s Health Elective

Objectives
1. Familiarize the student with the practice of gender-specific medicine, women’s preventive health, and
2. Strengthen the student’s ability to take a thorough obstetric/gynecologic and women’s preventive health
3. Expose the student to common gynecologic/obstetric procedures such as colposcopy, endometrial bi

Responsibilities
Take an active role in the assessment and management of patients in the hospital and office setting.

Evaluation
• Fund of medical knowledge
• Quality of assessments, plans, and presentations
• Clinical decision-making skills
• Attitude, motivation, and rapport with patients and team members

Scheduling
To determine availability of elective space, contact Lee Blomberg at (727) 467-2517. Housing may be available on

MEL 8273: Morton Plant Mease Family Medicine Flexible Elective

Objectives
1. To encourage the student to design and complete his or her own ideal elective within the realm of Family Medicine. This opportunity may be oriented toward FM in-patient acting internship, women’s health, pediatrics, geriatrics, nursing home, research, Ob/Gyn, acute care, etc.
2. To provide the student with housing when available.
3. To introduce the student to the breadth of Family Medicine.
Specific objectives to be determined based on elective scheduled

Responsibilities
The student is expected to design their elective in advance with Family Medicine faculty and to take an active role in the assessment and management of patients. For design assistance please contact Lee Blomberg at (727) 467-2517.

Evaluation
• Fund of medical knowledge
• Quality of assessments, plans, and presentations
• Clinical decision-making skills
• Attitude, motivation, and rapport with patients and team members

Scheduling
To determine availability of elective space, contact Lee Blomberg at (727) 467-2517. Housing may be available on

MEL 9999F: Independent Study in Family Medicine

Faculty and Staff of the Department of Family Medicine

Prior to scheduling this course, students must meet with their preceptor in order to identify and define their indeper must be completed at least 3 months prior to the start of the elective and submitted to the Registrar’s Office along with a c

Prior approval must be given by the preceptor to take this elective as a 2 week rotation.

Skin and Bones is a multidisciplinary four-week elective designed to enhance the student's competence in the recognition, diagnosis, and treatment of musculoskeletal, rheumatologic and dermatologic disorders. The clinical experience, designed to gain exposure to rheumatology, sports medicine, orthopedics (outpatient injury assessment and management) and dermatology, is tailored to the student's specialty track. Unlike the third year clerkship rotations, Skin and Bones clinical experiences are primarily outpatient-based. Students are given instruction followed by hands-on experience in various procedures used in each of these specialties.

Didactic highlights include
• Skin biopsy and suturing workshop providing hands on experience.
• Injection and aspiration workshop utilizing injection models, followed by clinical experience to learn to perform joint injections and aspirations on patients with direct supervision.
• Opportunity to become familiar with hands-on musculoskeletal ultrasound in a clinical setting.
• Didactics and clinical exposure to musculoskeletal diagnostic imaging.
• Online and live didactics and knowledge self-checks aimed at providing a basis for increasing knowledge in these specialties serving as a great preparation for USMLE.

Objectives

1. Apply these skills and medical knowledge while learning.

Dr. Cox and Faculty

The goals of this fourth year clerkship are to develop an approach to the care of patients with complex, critical illnesses; to understand the physiologic and pathologic abnormalities that occur in ICU patients; to apply scientific principles basic to the practice of medicine in the clinical management of complex illness.

After being exposed to critical care patients in a variety of disciplines, the student will demonstrate specific knowledge, skills, and attitudes relevant to critical care practice. The student will have an understanding of critical care guidelines and practices so that they will recognize patients with immediate life threatening conditions, institute appropriate initial therapy, and outline an initial course of management for patients with serious conditions requiring critical care.
This course is a selective for USF senior medical students and will include a rotation either through a Medical ICU, Pulmonary/Critical Care Consult ICU, Anesthesia Critical Care, Surgical/Trauma ICU, NICU, or PICU at the James A. Haley Veterans Hospital or Tampa General Hospital. The rotation assignment will be made based upon the student’s chosen career path. Students will be evaluated by written, oral, and/or practical methods which include direct patient contact and simulation training. In addition, the students will evaluate electrocardiograph (ECG) tracings through weekly quizzes to enhance interpretation skills. This course is NOT available to visiting students.

Research
The purpose of this elective is to provide SCP students the flexibility of pursuing creative scholarly projects/research under the direct supervision of a mentoring faculty member. It is expected that clear goals and objectives will be established in advance of requesting approval from the Scholarly Concentration Program to register.

Learning outcomes will be assessed based on attainment of goals and objectives set at the beginning of the project by the mentoring faculty member and student.

Elective Requirements
Prior to scheduling this elective, students must meet with their faculty mentor in order to identify and define their SCP capstone project. After determining a course of study, students must complete a SCP ELECTIVE Application, and attach a copy of the project proposal. Proposals must include goals, objectives, and an emphasis of study and be discussed with your faculty mentor before undertaking this elective. The student may be required to discuss the proposal in length with the SCP Director. Signatures need to be obtained from their USF Health faculty mentor, the concentration faculty leader and the SCP Director. Signed forms must be submitted to the Office of Educational Affairs /Scholarly Concentration’s Program in MDC 1100 at least 15 days before the start of the period.

**Evaluation**
A SCP ELECTIVE Self Assessment and Evaluation form must be completed at the end of the elective period. Students should be prepared to present their findings, often in the form of a paper, poster or powerpoint presentation. Student will receive an Incomplete (I) if the SCP ELECTIVE Self Assessment and Evaluation is not received within 2 weeks of the end of the period. Grade adjustments may be made once assessments are received.

Grading
Satisfactory / Unsatisfactory

This elective is NOT available to visiting students.

**MEL 7740: Radiation Oncology**

| 1,2,3,4,5,6 | BCC 7144 BCC 7164 | 2@MCC | FT, 44 hr wk | 4 |

Drs. Dilling, Rao, Stevens, Trots, Caudell, Hoffe, Hoytak, Chinnaiyan, Torres-Roca, Biagioli, Tomblyn, Shridhar, Wilder,

The Department of Radiation Oncology, Moffitt Cancer Center, provides comprehensive, patient-oriented care for all types of cancer using the most technically advanced equipment with concern for quality of life and education.

This elective is an introduction to basic Radiation Oncology with emphasis on clinical service designed to provide a background in principles of radiation oncology. Medical students will participate in all aspects of Radiation Oncology including clinical treatment planning, treatment delivery, and patient care.

**Rotation requirements**

1. Read at least 10 pertinent articles from the medical literature.
2. Attend all departmental conferences and multidisciplinary conferences with the preceptors.
3. Participate in simulations, procedures, follow-ups, on treatment visits and treatment planning.
4. Present a 15 minute PowerPoint talk on a topic defined with the assistance of the faculty preceptor.

At the completion of the elective, training faculty and students will complete performance evaluations.

Outdoor Medicine Elective
Drs. Jorge Marcet and Ryan Naughtin

This senior medical student elective is intended to teach the practical and theoretical medical skills necessary to identify, treat and prevent medical problems unique to the outdoor environment. The course is directed towards the outdoor or travel enthusiast who may find themselves in situations outside of the traditional clinical setting where they may be called upon to provide medical assistance. There will also be ample opportunities for students to present outdoor medicine topics to peers and junior medical students.

This is a year long elective from May through April. Students will register for the course during the period of their choice. Meetings will mostly be held on Saturdays, approximately 1-2 times a month, but may be held on weekday evenings, during lunch meetings, and some overnight activities. There will be a required 120 hours of attendance at meetings and there will be at least 160 hours available to accommodate senior students on externships. The culmination of the course is the Annual Florida Outdoor Medicine Conference.
usually held during the last month of the academic year in the Florida Keys (students are encouraged to register for course during this month). Students are also encouraged to plan to attend the Annual ACWM Southeast Student Wilderness Medicine Conference usually held in March as well as conferences of the Wilderness Medicine Society. There may be other activities that require travel to places such as Great Smoky Mountains National Park, Everglades National Park, or other distant locations. Students should also budget at least $250 for admission fees and equipment rental throughout the year and approximately $550-$800 for the Annual Florida Outdoor Medicine Conference. Examples of Meetings:
No Lifeguard on Duty" held at Ben T. Davis Beach and learned about Basic Water Rescue and Submersion Incidents.

"A 3-Hour Tour" held on an island in the Tampa Bay and learned about Seafood Toxidrome while catching Pufferfish.

"Disney World Marathon Weekend" providing medical support to endurance athletes from around the world.

Objectives

Practice medical skills to be used in situations outside of the hospital setting.
2. A world of medical decision-making.

3. Developing and understanding medical cyber and disaster systems.
Students will be evaluated by the course director at the end of the course. Students will be evaluated based on attendance and participation of course meetings (50%) as well as assigned outdoor medicine topic presentations (50%). Students will be required to attend 120 hours of meetings/activities over the 11 month period. There will be opportunities for at least 160 hours of meetings/activities. Students may expect to be given specific topics or scenarios to present at each meeting they plan to attend. Presentations will be evaluated by course directors and contribute to the presentation portion of the final grade.

MEL 8134: Introduction to Internal Medicine-Pediatrics
Drs. John McCormick, Erika Abel, Denise Edwards, and Hugo Narvarte

| 1,2,3,4,5,6 | Year 4 status | 1@TGH | FT, 40 hr wk | 4 |
This elective is designed to introduce senior students to the specialty of Internal Medicine-Pediatrics. Under the supervision of faculty, students will care for adults and children in an ambulatory primary care setting. Students will also have the opportunity to participate in rounds on inpatients at Tampa General Hospital. In addition to clinical experiences, didactic sessions will include participation in the weekly resident clinic curriculum, as well as department conferences (i.e., Grand Rounds, noon conferences). This elective will provide students with a robust clinical experience in primary care as well as a better understanding of Med-Peds as a career.

Objectives
1. Evaluate and treat problem in and out of jail.
2. Evaluation and treatment in adults and children in a prison setting.
3. Perspective: Prostate health includes screening for cancer, prostatitis, and erectile dysfunction.
4. Gain family's support for the primary care setting, including education and involvement in decision-making.
Gain a appreciation for the specialty of Internal Medicine-Pediatrics.

**Methods**

Senior medical students will see patients in the Internal Medicine-Pediatrics combined clinic at the USF Health South Tampa Center for Advanced Health Care under direct supervision of faculty. Trainees will also attend didactic conferences and participate in the weekly resident clinic curriculum. Students will also have the opportunity to see patients in an inpatient setting.

**Evaluation**

Ongoing as well as summative final assessment will be provided by supervising faculty. Students will also be required to prepare and present a primary care topic during their rotation.
MEL 8149: International Medical Spanish and Cultural Immersion
Drs. Carlos Callegari and Eduardo Gonzalez

This elective is designed to provide USF Medical Students an opportunity to participate in an established international Medical Spanish program. Participation in these programs will allow students to learn and/or improve conversational Medical Spanish and to experience the culture of a Spanish speaking country. It is expected that this experience will allow students to appropriately interact in a clinical setting with Spanish speaking patients abroad and in the USA. It is expected that this experience will increase the student’s functional language skills in real cultural, clinical and medical environments. Depending on the program, students will normally have scheduled class hours to learn basic and intermediate Spanish skills as well as time to interact with the local community. During the 4 week elective, students will be exposed to various clinical scenarios and have an opportunity to experience local customs as well as visit local settings. Students
wishing to participate will be required to fund their tuition, transportation, meals and other necessary items. Interested students should sign up no later than 6 months prior to the course. Students should also plan to schedule a meeting with Drs. Callegari or Gonzalez to review the requirements no later than 6 months prior to the course.

Objectives

1. Students will be able to establish communication in Spanish to the degree of:
   1. Understanding a patient's needs for seeking health care and obtaining their reason for the encounter (chief compliant)
   2. Conducting basic medical interviews and being able to characterize the signs and symptoms of the patient
   3. Being able to communicate requests when performing a general physical examination
2. Students will understand the differences between various clinical settings in the country, visit standard and complex with the U.S.ildo and health system.
3. Students will cooperate medical problems and health from local population with the Hispanic and non-Hispanic USA population.
Studied under and understand various topics, local, family, and cultural values and began to compare to the USA. Hispanic and non-Hispanic populations.
The learner's evaluation will be based on:

- Performance obtaining a clinical medical history in Spanish which may be conducted in an OSCE format before and after the experience.
- A written report on the learner's experience.
- Informal presentation to the directors on their experience as it relates to the cultural and medical Spanish aspects of the course.

MEL 8831: Surgical Oncology

Prior Approval Required: Students interested in a Surgical Oncology elective at Moffitt need to contact John Kiluk to plan their experience. This elective is designed for medical students who wish to gain an in-depth experience in surgical oncology. The course is available to Year 3 students who have taken BCC 7144 Integrated Internal Medicine-Pediatrics Clerkship and BCC 7164 Surgical Care Clerkship.

Objectives

1. Expose students to the role of the surgeon in the diagnosis, management, and surveillance of cancer patients.
2. Expose students to the importance of other disciplines (medical oncology, radiation oncology, pathology, etc.) in cancer care.
3. Introduce students to various emotional responses of patients to cancer and how best to manage these responses.
4. Expose students to the basics of clinical research in the care of cancer patients.
5. Educate students on advantages and disadvantages of different diagnostic tests, surgical choices, chemotherapy regimens, and screening techniques.

Methods

The student will be assigned to work with surgeons based on disease sites. These sites include: Breast, GI, GU, GYN, Head and Neck, Soft Tissue, and Urology. The course will cover procedures, inpatient rounds, and tumor boards.

Evaluation

The student will be evaluated by the course director at the end of the course. The evaluation will be based upon feedback from the attending surgeons that the student worked with. The course will be designed to be satisfactory or unsatisfactory.

Pre-requisites

This course is available to Year 3 students who have taken BCC 7144 Integrated Internal Medicine-Pediatrics Clerkship.
The Clinical Science Review I and II course is a variable contact hour multi-disciplinary course for medical students. This comprehensive course will consist of an in-depth review and application in the clinical science areas and will include basic science review if deemed appropriate. This course is for remedial work only.

**Section I**
- Emergent and Urgent Care Clerkship
- Integrated Internal Medicine-Pediatrics Clerkship
- Maternal Newborn Health Clerkship
- Neuropsychiatry Clerkship
- Primary Care and Special Populations Clerkship
- Surgical Care Clerkship

**Section II**
Additional areas not identified in Section I above.

The course objective is to enhance clinical skills in any of the listed Clinical Sciences.

Please submit a brief email to Dr. Stevenson prior to signing up for this elective indicating...
which months you are available and why you are interested in the elective. Indicate any specific organ system blocks you would like to work in and why.

Requests to add the course must be received at least 2 months prior to the start date.

Education Scholarly Ccn students need to complete a total of 4 weeks to meet the concentration requirements.

This elective is designed to introduce senior medical students to the role of clinicians in teaching the "basic sciences". Students will work with Year 1-2 faculty to design active learning and case study materials, teach in interdisciplinary labs, active learning sessions, and case discussions, and review the content taught the students from the perspective of a generalist third or fourth year student. Students will receive seminar instruction on effective lecture and active learning teaching techniques, and will research and prepare two short lectures for a mixed faculty/student audience on basic science topics of their choice, with improvement demonstrated on the second lecture after feedback is received on the first.

Objectives
1. Understand and the technical role of an academic physician in the pre-clinical curriculum.
Become aware of effective techniques, feedback, black/ethical hacking, and appropriate methodologies with didactic learners.
3. Collaborate with pre-clerkship faculty to teach MS1 and MS2 students effectively in lab, small group, and/or large group activities.
4. Assume teaching responsibilities and acquire knowledge to improve their current teaching skills.
5. Demonstrate the ability to deliver an effective basic science lecture, integrating active learning principles into sessions.

Learning Outcomes

By the end of this elective, the student should better understand basic principles of good basic science teaching and be able to demonstrate effective teaching techniques.

Evaluation
- Active participation in teaching seminars
- Active collaboration with pre-clerkship instructors to develop teaching materials.
- Delivery of a well-researched lecture, with improvement on a second presentation after feedback is received.

Requires permission of the course director.

MDE 8030: BRIDGE Clinic
Longitudinal Elective
Drs. Eduardo Gonzalez and Lucy Guerra

| Year-long | Year 4 status | 4@USF-MS | FT, 4 hr wk | 44 |
This longitudinal elective would reinforce and teach the knowledge, skills and attitudes that are needed to direct a multidisciplinary healthcare clinic. Students will be required to lead and attend monthly BRIDGE clinic meetings, meet with medical advisors regularly, attend and lead BRIDGE clinics over the year, develop a presentation/poster to present at a national meeting, organize and coordinate other specialties and organizations within BRIDGE. In all, it is expected that each student will have completed a minimum of 150 hours over the academic year. The course is longitudinal, as the responsibilities of these students will continue throughout the academic year.

Objectives
1. Develop skills to properly manage any medical practice or clinic.
2. To manage professional relationships with Montclair Borough Health Department, Quest Diagnostics, Security Personnel, Moran.
3. Understand the Business Impacts as a part of Medicine through collaboration with Dr. Marsh all and the Business Scholarship Concentration
4. Update and renew documents for clinical operations includingudiating the context, implementing protocols, and maintaining records.
5. Provide access to healthcare for patients of many different backgrounds with limited access.

By the end of the elective, students should feel competent managing a multidisciplinary healthcare clinic. They will understand how to collaborate with various organizations and groups and have a sense of the business and financial needs of such a clinic. Their progress will be assessed by direct observation by the faculty medical directors, and successful completion of assigned responsibilities and projects which will include a poster/presentation that will be presented at a national meeting.

Only students elected to be the student medical directors for BRIDGE will be eligible for this elective. Students must agree to hour requirements and need to inform concurrent senior course directors of their involvement in this longitudinal course. Students should notify and obtain permission from Drs. Guerra or Gonzalez prior to scheduling.

students from engineering, nursing, communication and public health, will explore concepts of human error, patient safety, and related healthcare quality issues through a series of weekly seminars over three months. In addition, students will work in small interdisciplinary groups, together with faculty and staff from Tampa General Hospital and all four colleges, to identify and analyze a real patient safety problem and develop a solution. Students will develop a comprehensive understanding of the science relating to human error in general and human factors in particular, will master several critical skills in problem solving and error analysis, and will improve their skills in working together with other professionals in the collaborative resolution of a complex problem. Medical Students will receive credit for one block rotation, although the time commitment will be approximately 6 hours per week for three months (3 hours of seminar and 3 hours of small group work.) Invited experts will give many of the seminars, together with USF faculty from the five colleges. Each interdisciplinary group will be asked to give a summary presentation of their work and submit a referenced
paper describing the project.

Objectives

1. Explain the psychological basis of human error.
2. Summarize your understanding of error in medical practice.
3. Explain the classification of medical errors that at least one specialty of medical practice
4. Identify and analyze an actual patient safety problem at a hospital
Evaluation
The student will be evaluated by course faculty, based on participation in class seminars and on the submitted interdisciplinary patient safety project.

Interested students must meet with Dr. Fabri prior to August. Students should be prepared to describe why they should be selected for the course.

<th>MDE 8090: Doctoring IV - Theory and Practice of Teaching</th>
<th>Dr. Frazier Stevenson</th>
</tr>
</thead>
<tbody>
<tr>
<td>Year-long Year 4 status no limit @USFMS</td>
<td>FT. 40 hr wk 4 weeks</td>
</tr>
<tr>
<td>This elective will introduce senior students to the practice and theory of adult education. They will teach for 70 hours in the College of Medicine co-facilitating Doctoring 1, 2, and 3 small groups with senior faculty, and attend seminars that introduce them to education pedagogy and effective teaching technique. They will reflect and write on their teaching experience, and receive feedback from students, course faculty, and the elective director about their teaching performance. The course is longitudinal, so teaching activities can occur throughout the senior year, tailored to students' individual schedules.</td>
<td>44</td>
</tr>
</tbody>
</table>
Objectives

1. Demonstrate the practice of good clinical and small group teaching.

2. Understand the theory of adult education.
3. Reflect on teaching experiences in written and verbal media.

4. Be able to deliver effective feedback to students and peers.

Evaluation
By the end of the elective, students should feel competent to teach in both small group and clinical teaching settings. They will understand how to give feedback to individuals. Their progress will be assessed by review of student teaching evaluations, observation of COM course leaders, and direct observation by the elective director.

All interested students must meet with and obtain approval from Dr. Stevenson before registration. Students must agree to hour's requirements and need to inform concurrent senior course directors of their involvement in this longitudinal course.

Allergic and immunologic problems affect up to 20% of adults and children in the United States, therefore, students rotating in Allergy and Immunology are exposed to a variety of common problems important to physicians regardless of their specialty interests. Both children and adults are seen in the clinics. The objective of the Allergy/Immunology experience is to familiarize the student with the pathogenesis, diagnosis, and treatment of various allergic and immunologic diseases. The student will examine patients with common medical diseases such as allergic rhinoconjunctivitis, chronic rhinitis, acute and chronic sinusitis, various forms of asthma, otitis media with effusion, hypersensitivity pneumonitis, atopic eczema, contact dermatitis, urticaria and/or angioedema, drug allergy, insect hypersensitivity, and food allergy. The student will also examine patients with immune deficiency diseases (including HIV infection), eosinophilia, eosinophilic syndromes, and various other immunologic problems.
The student will primarily be involved in outpatient care at the VA Hospital, Tampa General Hospital, H. Lee Moffitt Cancer Center, All Children's Hospital, USF Adult and Pediatric Allergy Immunology and Immunodeficiency Clinics and will attend four weekly conferences on clinical allergy and immunology given by residents, fellows and faculty from USF College of Medicine.

Evaluation

Evaluations will be completed by the faculty members who assess the level of clinical competence attained.

Prerequisite

BCC 7144 Integrated Internal Medicine-Pediatrics Clerkship and BCC 7184 Primary Care Clerkship

MEL 8376: Basic and/or Clinical Respiratory Disease Research Drs. Kolliputi, Teng, Wang, Lockey, Ledford, Fox and Glaum

Year 4 status 1,2,3,4,5,6,7,8,9,10,11 1@TVAH FT, 44 hr wk 4
Allergic and immunologic problems affect up to 20% of adults and children in the United States. Therefore students rotating in Allergy and Immunology are exposed to a variety of common problems important to physicians regardless of their specialty interests. Both children and adults are cared for in the Division of Allergy and Immunology.

**Objectives**

The objectives of the respiratory disease research experience at the Joy McCann Culverhouse Airway Disease Center are to familiarize the student with some of the contemporary research methods relating to pathogenesis, diagnosis, and treatment of various allergic and immunologic diseases. The student will participate in hands-on research as it relates to respiratory syncytial virus induced respiratory diseases and the pathogenesis of pulmonary fibrosis and asthma. Many other projects by the faculty are underway and the students can participate in research projects in which they have an interest. The student will also have the opportunity
to participate in the asthma, allergy and immunology clinical research unit, where up to 30 clinical research projects are ongoing at any one time. Diseases targeted for research include asthma, COPD, allergic rhinoconjunctivitis, chronic rhinitis, acute and chronic sinusitis, nasal polyps, atopic eczema, urticaria and or angioedema, food allergy, hereditary angioedema and others. The student will learn the accepted methods used in clinical research in this state-of-the-art program.

The student will attend four weekly conferences on basic immunology and clinical allergy and immunology given by residents, fellows and faculty from USF College of Medicine. The student will present a synopsis of his/her work in the last week of his training.

Evaluation

The faculty members and staff associated with the training program will assess the level of competence and will complete evaluations.

At TGH and T-VAH. This elective offers an opportunity to develop skills in the evaluation of patients referred for cardiology consultation at the VA and Tampa General Hospital. The students will participate in the evaluation of patients referred for cardiology consultation and will assist with the integration of the general medical data base with data gathered by both noninvasive (electrocardiography, ambulatory electrocardiography, stress testing) and invasive hemodynamic techniques, where indicated. This course allows the student to interpret a large number of electrocardiograms under the supervision of the attending staff. Staff attending review will provide individual instruction. Attendance at various other weekly Cardiology Department teaching conferences is required.
Evaluation

The faculty will make performance evaluations from data derived from clinical discussions and didactic presentations by the student.

At BP-VAH:
This rotation will consist of direct exposure to clinical care of patients in the inpatient and outpatient settings. A low student to instructor ratio will facilitate a nourishing learning environment. Students will evaluate patients with all categories of cardiac disease, and cardiac history taking and examination skills will be honed. Additionally, students will be involved with interpretation of studies including echocardiograms, Holter monitoring, and stress examinations. Students will be given the opportunity to enhance their EKG interpretation skills and become familiar with the cardiac catheterization and electrophysiology laboratories. Per student preference, exposure to other cardiac imaging modalities including nuclear cardiology, cardiac MRI, and cardiac CT can be provided. Students will be provided with a schedule of subjects as an outline for reading.
**Evaluation**

Each student will be asked to complete a cardiology subject syllabus with the clerkship director. This will consist of 10-15 minutes mini lectures provided to the student(s) several times per month. Each student will make one PowerPoint presentation on a subject decided upon at the beginning of the rotation.

MEL 8351: Harvey Elective in Cardiology
Dr. Fred Sloane and Dawn M. Schocken, MPH
The major objective of this elective will be to teach the student to perform comprehensive cardiac assessment, emphasizing the physical examination. The course will utilize Harvey (the teaching manikin) and actual patients. This elective will be primarily a self-study course (utilizing Harvey) with a weekly lecture from a cardiologist to review the materials and a weekly quiz to assess the student’s progress in their self-study program. Time will also be devoted to acquiring fundamentals of ECG interpretation and exposure to utilization of exercise testing, echocardiography and cardiac catheterization. Attendance at cardiology teaching conferences is optional.
Course objectives will be assessed by the documentation of individual's practice on the manikin as well as the three quizzes and a comprehensive written and practical examination at its conclusion.

**Track**

One of the options for Emergency Medicine, Family Medicine, and Internal Medicine.

Note: This course is also listed under Internal Medicine.

This introduction to Emergency Medicine integrates clinical skills and evidence-based medicine through didactic lectures, observation, performance of clinical procedures, hands-on clinical experiences, and direct interaction with faculty, individual patients, and families. Students will manage the patient using the "team approach," which involves EMTs, nurses, physicians, and students. They are expected to evaluate patients, address their presenting complaints, initiate workups, and provide definitive therapies. There is also interactive simulated skills sessions ranging from suturing, central lines, lumbar puncture, and intubations.
This rotation will enrich students’ knowledge, help them develop history-taking ability, physical skill assessment, and diagnostic and management skills, procedural skills, as well as help them develop a caring, compassionate, and empathetic attitude in dealing with patients and their families.

Because of the wide array of patients and pathology, the rotation is an excellent introduction to acute care and primary care medicine regardless of which ever field the student may be considering. It is required prerequisite for those USF students considering Emergency Medicine as a career.

Evaluation
The student's grade is primarily based on daily attending evaluations but will incorporate quality case presentations, clinical skills evaluation, required attendance at emergency medicine conferences, and written testing.

This subinternship integrates clinical skills and evidence-based medicine through didactic lectures, performance of clinical procedures, hands-on clinical experiences, observation and direct interaction with faculty, individual patients, and families. Students will manage the patient using the "team approach," which involves EMTs, nurses, physicians, and students. Students are expected to evaluate patients, address their presenting complaints, initiate workups, and provide definitive therapies.

This rotation will enrich students' knowledge, help them develop history-taking ability, physical skill assessment, diagnostic and management skills, as well as help them develop a caring, compassionate and empathetic attitude in dealing with patients and their families.
The student's grade is based on daily attending evaluations, quality case presentations, attendance at emergency medicine conferences and submission of two SAEM examinations.
MEL 8368: Emergency Medicine Outside the Hospital
Dr. Catherine Carrubba

The purpose of this elective is to give the student a broad exposure to the scope of pre-hospital emergency medical services.

Objectives

1. Gain an understanding of pre-hospital patient care by rotation with the Tampa Fire Rescue Department and Aeromed at Tampa General Hospital
2. Learn to manage common toxicological problems by rotation in the Florida Poison Control Center at Tampa General Hospital
3. Be exposed to EMS Administration by accompanying the medical director of Tampa Fire and Aeromed during administrative duties
4. Gain an understanding of resource allocation and pre-arrival instruction initiatives by rotation at Signal One Fire and Rescue Dispatch

Time spent in these various areas will depend on the interests and experience of the student participating. A maximum of two students will be accommodated in each rotational block.
The purpose of this elective is to provide students the flexibility of pursuing creative scholarly projects/research under the direct supervision of a mentoring faculty member. It is expected that clear goals and objectives will be established in advance of requesting approval from the department to register.

In order to register for this elective, an Independent Study Application MUST have signatures of the elective faculty preceptor and Director of Students Program, Department Director for Internal Medicine, and the Associate Dean for Undergraduate Medical Education. This form can be obtained from the Registrar's office.

Upon successful completion of this elective, the student may expect to achieve an acceptable level of competence in the management of disorders of the gastrointestinal tract and liver. This will be achieved by the interpretation of symptoms and physical findings, utilization of appropriate laboratory and other diagnostic studies, knowledge of the basic therapeutic approaches, and interpretation of the gastrointestinal radiographs and other imaging techniques. There will be a combination of direct patient contact and personal instruction. Observation of a variety of procedures including diagnostic and...
therapeutic upper GI panendoscopy, capsule endoscopy, colonoscopy, polypectomy, diagnostic and therapeutic ERCP, flexible sigmoidoscopy, esophageal dilation and manometry studies will be afforded. Hand-on experience in capsule endoscopy is available.

Attendance at ward and teaching rounds, outpatient clinics and teaching conferences will provide a further source of learning. Emphasis will be placed on pathophysiology, clinical manifestations, diagnosis and therapy. Emphasis will also be placed on the techniques of clinical nutrition.

Students can participate in a short research project during the rotation or may elect to begin participation in a long term research project. Students can elect assignment to Tampa General Hospital, the Veterans Administration Hospital, or the USF Medical Clinics. Students will participate in a regularly scheduled conferences and clinics.

**Evaluation**

The faculty will base their performance evaluations upon clinical discussions and didactic presentations by the student.

This course will familiarize and engage the senior medical student in the basic principles and management of complex patients who are referred to a tertiary care center. This course should provide an invaluable clinical experience particularly for those who wish to pursue further training in the fields of ENT (otolaryngology), allergy and immunology, gastroenterology, gastrointestinal surgery (laparoscopic esophageal surgery), gastrointestinal radiology or neurology. The student will be involved in the different aspects of patient care including: history taking and physical examination; diagnostic approach and planning for therapy; observation and participation in oropharyngeal, voice and esophageal function testing and basic interpretation of the studies. The senior medical student will be given ample time for observing specialized procedures (including endoscopy and radiographic examinations) and will be provided the opportunity to longitudinally follow patients they have initially seen for evaluation. They will be involved in a “team” together with the nurses, patient care coordinators, speech pathologist, and physician members. Clinical activities are mainly based at the fully equipped Esophageal, Swallowing and Voice Function Laboratory at the USF Health North campus with endoscopic procedures performed at the Endoscopy Units at the Morsani Center for Advanced Health Care and the Moffitt Cancer Center.
Objectives

1. Review and apply basic scientific principles, pathophysiology, clinical laboratory methods, radiology examinations and cognitive skills as they relate to the diagnosis and treatment of esophageal and swallowing disorders.

2. Familiarize the senior medical student with certain procedures most commonly performed during the evaluation and therapy for these disorders which include: Fiberoptic Endoscopic Evaluation of Swallowing
   1. Observation of the actual procedure being performed
   2. Discussion of the basic interpretation of these procedures
   3. Observe and participate in the discussions about the impact of test results on the therapeutic plan

3. Expose the senior medical student to evaluation and management of a wide variety of esophageal and swallowing disorders including basic evaluation and treatment of oropharyngeal dysfunction.

4. Expose the senior medical student to evaluation of neurologic conditions (i.e. ALS, Parkinson disease, Huntington Chorea), patient conditions after surgery (anti-reflux procedures, bariatric procedures esophagectomy, laparoscopic surgery) and treatment for head and neck cancer (radiation, chemo-or surgical therapy).

5. Familiarize the medical student with a multi-disciplinary approach to evaluation and management of complex esophageal and swallowing disorders (“center” model).

Learning Outcomes

At the end of the rotation the senior medical student is expected to:

- Observe and participate in the discussions about the impact of test results on the therapeutic plan.
- Familiarize the medical student with a multi-disciplinary approach to evaluation and management of complex esophageal and swallowing disorders (“center” model).
1. Become familiar with the anatomic, radiographic, endoscopic and physiologic, aspects of swallowing, esophageal and voice functions

2. Become familiar with the different aspects of abnormal or pathologic function for swallowing, esophageal and voice related disorders

3. Become familiar with the diagnostic approach and treatment options for dysphagia, voice disorders and gastroesophageal reflux diseases

4. Follow several patients from initial evaluation until they have received therapy or completed the diagnostic work-up

5. Become familiar with certain procedures commonly performed during evaluation and therapy for oropharyngeal, and esophageal swallowing disorders

6. Become familiar with a "center" approach to complex but focused medical problems and understand the interaction between the different members of the team

Evaluation
1. Periodic (at least once a week) feedback sessions will be provided to the student.

2. The medical student will receive a written evaluation at the end of the month. This will be reviewed with the student by the faculty evaluator.

3. Faculty performance will be evaluated by the medical student (anonymously submitted to the center director).

4. Comments will be given for exceptional performance.

Any student interested in this rotation is encouraged to contact Dr. Estores (destores@health.usf.edu).

MEL 8350: Hepatology Elective

<table>

<tr>
<td>1@TDH</td>
<td>FT, 44 hr/wk</td>
<td>2.4</td>
</tr>
</tbody>
</table>
This course will familiarize and introduce the senior medical student to the multifaceted field of Hepatology. The medical student will be afforded the opportunity to learn from team members of a top five US solid organ transplant program. This course should provide an invaluable clinical experience particularly for those who wish to pursue further training in any surgical or medical field. The student will be involved in the numerous aspects of patient care, will receive daily didactic education, have the potential to participate in research projects, and offered the opportunity to observe the "gift of life" liver transplantation. The medical student will have the opportunity to help assist with critical ill patients, observe numerous endoscopic procedures, and observe the transplant selection committee.

Objectives
1. Understand the various causes of liver disease and methods of treatment for acute and chronic liver disease.

2. Learn and appreciate the various pathological physiological disease mechanisms within the liver.

3. Obtain and improve knowledge base and understanding of complications related to cirrhosis and hepatic end organ failure.

4. Recognize and behave for exceptional performance.
In addition, there will be exposure to the management of pre and post liver transplant patients. This will be achieved by the interpretation of symptoms and physical findings, utilization of appropriate laboratory and radiological investigations, and review of pathologic material. Patients are seen at Tampa General Hospital.

Students will participate at scheduled conferences, and may optionally be asked to present at a conference. The opportunity for a short research project will also be available.

Any student interested in this rotation is encouraged to contact Dr. Neff at gneff@tgh.org.

Students will rotate on the Internal and Hospital Medicine (IHM) Inpatient service at Moffitt Cancer Center. The student will have exposure to problems such as atrial fibrillation, heart failure, diabetes management, thromboembolic disease, transfusion medicine, and neutropenic fever within the context of the oncology patient. Students will also be exposed to managing cancer pain and be an integral part of end-of-life care discussions with patients and their families. The student will work directly with the IHM attending on the interdisciplinary teaching service. The interdisciplinary team consists of a resident, intern and AI in addition to social work, pharmacy, case management, and advance practice professionals. During the month, the student is expected to attend Morning Report, Noon conference, Grand Rounds and Board review sessions. Depending on student interest, there are additional opportunities to gain exposure to outpatient and consultative services also provided by the IHM program.
Objectives

1. Introduction to comprehensive, interdisciplinary hospital-based care of cancer patients
2. Learn how to perform complete history and physical examinations
3. Master the art communication with writing a daily progress note as well as oral presentation
4. Develop a thorough differential diagnosis in a problem based fashion
5. Introduction to the management of many common inpatient medical problems/diagnoses

Evaluation

Evaluation of the student will reflect the overall performance on the rotation including history and physical examination skills, constructing differential diagnosis and oral presentations by the attending physician.

MEL 8121: Hospital Medicine and Patient Safety Elective
Dr. Alexander Reiss

This rotation at the VA Hospital is designed to further the fourth year medical student’s education in internal medicine and examine the topics of patient safety and preventable medical errors. During the month, the student will provide hospitalist care for a limited number of inpatients admitted to the general medical wards under the direct mentorship of VA medicine attendings, simulating the role of private hospitalist physicians. There is no call or weekend work.
Integrated into the clinical duties is a curriculum focused on medical errors and patient safety. It includes didactic sessions, practical exercises in identifying engineering hazards, and safety workshops. In 1999, The Institute of Medicine published *To Err Is Human: Building a Safer Health System* asserting a sobering statistic: tens of thousands of patients die each year in the U.S. from medical errors. Since that landmark publication, the concepts of medical errors and patient safety have surged into the spotlight of the media, the public, and policymakers. This rotation creates a new framework for students/physicians to consider patient safety and prevention of medical errors while advancing the internal medicine skills of the student, preparing them for internship.

**Objectives**

1. Further the student’s education of internal medicine
2. Expose the student to the concepts of patient safety and preventable medical errors
3. Introduce the student to hospitalist medicine
4. Explore the “systems” approach to medical errors
5. Understand human factor engineering in the medical environment
6. Participate in root cause analysis process

**Learning Outcomes**
1. Gain understanding of Hospitalist medicine concepts
2. Understand human factor engineering and cite specific patient care examples
3. Manage patients in the capacity of an acting intern during business hours, answering pages, writing orders and notes, and admitting and discharging them
4. Participate in root cause analyses if opportunity is available
5. Attend learning conferences with the housestaff
6. Present a morning report or noon conference on patient safety
7. Understand the "system" approach to medical errors and contrast that with the "blame" system

**Evaluation**

Supervising attending evaluations, completion of skills modules, quiz scores, presentation evaluations, etc.

This elective is not available to visiting students.

| Course Code | Course Description | Year Status | Credits | Hours | Site
|-------------|--------------------|-------------|---------|-------|------
| MEL 7320M  | Externship in Medicine | no limit @EXT | FT, 44 hr wk | 4 |
| MEL 8332  | Elective in Rural Medicine (AHEC) | 1 per site | FT, 44 hr wk | 2,4 |
This elective is designed to introduce senior students to the practice of medicine in a rural community. Under the supervision of clinical faculty, students will have the opportunity to practice in a private office or in a community/migrant health center. Students will also round with the preceptor in the hospital. This elective will provide students with a better understanding of rural medicine and the tremendous health needs of underserved rural and migrant populations. Housing will be provided for students at DeSoto Memorial Hospital. Gulfcoast South AHEC will provide students with a fixed travel reimbursement.

**Objectives**

1. Compare and contrast the health needs and problems encountered in rural practice to those encountered in prior urban rotations
2. Identify the unique opportunities and challenges to medical practice and life in a rural area
3. Introduce/sensitize the student to cross-cultural issues in health care
4. Understand mechanisms and indications for consultation and referral in rural practice
5. Evaluate the business management of rural practice including availability of organized funding for patient care, managed care, etc.

**Evaluation**

The clinical faculty will evaluate the progress and performance of the student in the clinical setting(s).
This elective must be scheduled through Anne Maynard from the AHEC office. Final arrangements for the elective must be made through the Ms. Maynard in conjunction with Gulfcoast North or Gulfcoast South AHEC.

**MEL 8334: Acting Medicine Internship**
- General Internal Medicine
- Hospitalist Faculty

| 1,2,4,5,6,7,8,9,10,11 | BCC 7134 | BCC 7144 | BCC 7154 | BCC 7164 | 5@TGH | 5@TVAH | 1@MCC | FT, 64 hr wk | 4 |
Students will function as acting interns on the general ward teams at either Tampa General Hospital, Moffitt Cancer Center or at the James A. Haley VA Hospital. They will be given direct patient care clinical duties and responsibilities usually assigned to the first year house officer. The medical team residents and attending will closely supervise these clinical responsibilities. The level of clinical responsibilities will be distinctly above that of a third year clerkship rotation in internal medicine. Participating students will have an in depth autonomous inpatient experience so they may confidently assume such care in their PGY1 year regardless of their career choice. Mandatory attendance, excluding patient emergencies, is expected at morning report, noon conference, and grand rounds. Students are also encouraged to participate in the monthly journal club and the M&M conferences.

Objectives
1. Introduce the student to hospital based care and management.
2. Student will learn how to perform adequate and thorough history and physical examinations.
3. Write appropriate progress notes and all orders for therapeutic and diagnostic intervention with appropriate counter signature.
4. Participate on night call every fifth night as scheduled with the assigned team.
5. Learn and participate in internal medicine procedures including: paracentesis, thoracentesis, lumbar puncture, central line placement
6. Transition of patients from the Medical Intensive Care Unit.
7. Communicate inpatient management and outcomes with patient’s primary care physician.
8. Participate and learn appropriate discharge planning, utilization of system based care in the management of their patients and how to do discharge summaries.
9. Learn to interpret EKG’s, radiographic studies, PFT’s and appropriate lab diagnostic studies.

At MCC:
This rotation allows the medical student to learn how to diagnose and treat common medical conditions and exposes the student to medical emergencies that are more common in cancer patients. During this rotation, the student will be required to attend morning report, noon conferences and Grand rounds. The student will perform history and physical examination with the supervision of attending physicians and residents, write daily progress notes and assist in discharge planning. No overnight call or weekend responsibilities however students will be expected to stay late during certain days of the week to assist with admissions.

MEL 8335: General Internal Medicine Consult Service
General Internal Medicine Faculty
1, 2, 3, 4, 5, 6, 7, 8, 10, 11
BCC 7144
BCC 7184
1@MCC, 1@TGH
FT, 44 hr wk
2@TGH, 4@MCC
At TGH:
This course offers the opportunity to participate in the major practice activities of the general internist. The student will be a member of the general internal medicine consultation team at one of the hospitals. The consultation team evaluates and treats medical problems of patients on other services and participates in the perioperative care of surgical patients.
At MCC:
Students will work directly with the Medicine attending on the Internal Medicine Consultation Service at Moffitt Cancer Center. The student will be exposed to a variety of different medical issues in the setting of an oncological diagnosis. This will include preoperative evaluations, as well as management of postoperative complications such as Atrial Fibrillation, Pulmonary Embolism, Hypertension Urgencies/Emergencies. The student will also be given the opportunity to be a part of the Rapid Response Team (RRT) with a pager. Upon being paged, the student is required to respond immediately to unstable patients/staff/visitors throughout the entire hospital, including inpatient setting, outpatient clinics, laboratory, radiology suites, pre/post-operative holding areas requiring immediate attention. This experience will prepare and enhance the student’s critical thinking skills needed in internship when evaluating and treating unstable patients.
Morning report, noon conferences, Grand Rounds, and board review will also be a required portion of this rotation.
This elective in Internal Medicine allows the 4th year medical student exposure to urgent care issues in cancer patients. The 4th year medical student will be working in the Direct Referral Center with midlevel professionals and an Internal Medicine attending. The student will have the opportunity to learn how to diagnose and treat urgent/emergent medical conditions. This rotation will enrich the students’ knowledge in the fundamentals of urgent care medicine and will provide an excellent opportunity for the student to develop their physical exam skills. Students will perform both history and physical exams and will be expected to develop differential diagnoses pertaining to each complaint. During this rotation, students will be exposed to all levels of care in cancer patients. Students will also be given the opportunity...
to be a part of the Rapid Response Team (RRT). This team provides immediate attention to unstable patients/staff/visitors throughout the entire hospital, including inpatient setting, outpatient clinics, laboratory, radiology suites, pre-/post-operative holding areas and common areas. This experience will assist the student in preparation for their upcoming internship in both identifying unstable patients and learning the initial workup/treatment in various situations. During this rotation, students will be required to attend morning report, noon conferences and Grand rounds. No overnight call, evening shifts or weekend responsibilities.

Objectives

1. Introduce the student to urgent care medicine in cancer patients
2. Further the student’s education of Internal Medicine through clinical exposure to various patient presentations
3. Develop the student’s clinical skills by evaluating history and physical exams
4. Explore broad differential diagnoses for common symptoms
5. Diagnose and treat various medical problems in cancer patients

Evaluation
The student will be evaluated by the attending physician on service at the end of the rotation, based on the student's patient presentation, history and physical exams and development of broad differential diagnoses. Grades are determined by: 50% clinical evaluations, 25% graded history and physical and 25% oral case presentation.

This elective offers the fourth year medical student a review of pertinent skills for a smoother transition to internship. The course will predominantly consist of case based conferences which will be a review such topics as writing orders, common overnight call issues, common procedures, reading EKG, CXR, and ABGs, electrolyte abnormalities, ACLS protocol, the role of the resident as an educator and evaluator, tips for improving patient and family communication, review of advance directives and the utilization of other resources. Students will be required to shadow the cross cover resident during the work week twice during the month. Attendance to various internal medicine conferences (morning report and noon conference) is optional.

**Objectives**

1. Diagnose and treat common overnight call issues
2. Practice and learn common bedside medical procedures
3. Improve teaching skills to be a better educator
4. Improve communication skills specifically delivering bad news
5. Familiarize yourself with ancillary medical services in the hospital/community and how these services can improve patient care
6. Learn skills to improve balancing the rigors of residency with personal/social endeavors

**Learning Outcomes**

- 
- 
- 
- 
- 
-
At the end of the month, students should feel more comfortable with the skills that will make their transition to residency smoother and to maximize the learning environment in residency.

Evaluation

Students will be evaluated on attendance, participation in case based conferences, involvement in cross cover calls, and an end of the month presentation.
Students will function as acting interns on the general ward teams at either Tampa General Hospital, Moffitt Cancer Center or at the James A. Haley VA Hospital. They will be given direct patient care clinical duties and responsibilities usually assigned to the first year house officer. The medical team residents and attending will closely supervise these clinical responsibilities. The level of clinical responsibilities will be distinctly above that of a third year clerkship rotation in internal medicine. Participating students will have an in depth autonomous inpatient experience so they may confidently assume such care in their PGY1 year regardless of their career choice. Mandatory attendance, excluding patient emergencies, is expected at morning report, noon conference, and grand rounds. Students are also encouraged to participate in the monthly journal club and the M&M conferences.

Objectives
1. Introduce the student to hospital based care and management.
2. Students will learn how to perform adequate and thorough history and physical examinations.
3. Write appropriate progress notes and all orders for therapeutic and diagnostic intervention with appropriate counter signature.
4. Participate on night call every fifth night as scheduled with the assigned team.
5. Learn and participate in internal medicine procedures including: paracentesis, thoracentesis, lumbar puncture, central line placement.
6. Transition of patients from the Medical Intensive Care Unit.
7. Communicate inpatient management and outcomes with patient’s primary care physician.
8. Participate and learn appropriate discharge planning, utilization of system based care in the management of their patients and how to do discharge summaries.
9. Learn to interpret EKG’s, radiographic studies, PFT’s and appropriate lab diagnostic studies.

As part of the Honors Medicine Acting Internship, students must either complete a research project (i.e. submit an abstract to a regional or national meeting), attend a Florida ACP meeting, or make an advocacy trip with the ACP.
MEL 9999M: Independent Study in Medicine

General Internal Medicine Faculty

The purpose of this elective is to provide students the flexibility of pursuing creative scholarly projects or research under the direct supervision of a mentoring faculty member. It is expected that clear goals and objectives will be established in advance of requesting approval from the department to register.

In order to register for this elective, an Independent Study Application MUST have signatures of BOTH the elective faculty preceptor and Director of Students Program, Department of Internal Medicine. This form can be obtained from the Registrar's office.

| MEL 8308: Ambulatory Hematology Oncology
| Per. 11 | none | USF & South Tampa FT | 44 hr/wk | 2.4 |
principles of medical management, evaluation and management of hematologic and cancer related problems in the outpatient setting. Students will participate with hematology/oncology fellows and faculty members in the care of patients seen at the H. L. Moffitt Cancer Center, James A. Haley VA Medical Center, Tampa General Hospital and/or University of South Florida. There will be scheduled conference activities in which the student will participate. The student will see approximately 10-12 established and 3-5 new patients per week. The student will be required to present and discuss in depth, patient evaluation and management issues. The student will be evaluated on the basis of the adequacy of patient evaluation and case presentations.
The objective of this elective is to attain a solid understanding of the pathophysiology, clinical manifestations, diagnostic studies and management of malignant hematological disorders, hematological complications of malignant diseases, and hematological consequences of cancer chemotherapy. The student will serve as an acting intern on the inpatient hematology service and will have extensive contact with the attendings of the division who will provide the basic tutorial supervision in the Hematology Conferences. The students will be required to participate in teaching and patient care rounds, special patient care conferences, and scheduled hematology
The students also will be introduced and exposed to the specialized research projects occurring in the division as well as to the special laboratory evaluation procedures used in hematology. The students will be expected to prepare a literature review on a specified topic for presentation. The faculty will complete performance evaluations based on the clinical discussions and didactic presentations by the student and on the performance of the student in patient care-related activities.

| MEL 8345: Inpatient Medical Oncology | 1,2,3,4,5,6,7,8,9,10,11 | BCC 7144, BCC 7184 | 1@MCC | FT, 44 hr wk | 2,4 |

Dr. Kenneth Zuckerma...
of patients with malignant disease who require hospitalization, including diagnostic studies, management of all stages of malignant diseases, diagnosis and management of complications of cancer and cancer chemotherapy, palliative care of cancer patients, and end-of-life care. The student will serve as an acting intern on the Medical Oncology Inpatient Service at the Moffitt Cancer Center. The student will participate with residents and fellows in the primary care of cancer patients. Participation in daily teaching and work rounds, cancer patient care conference, and other scheduled teaching conferences is required. The student will be expected to prepare a literature review on a specified topic for presentation. In addition, the student's performance in
Objectives

1. Have an understanding of the process of bone marrow transplantation and the associated immunobiology of immune recovery after ablative therapy and identify the different types of transplantation (syngeneic, allogeneic, and autologous) and the diseases in which each type of transplantation may play a role.
2. Identify common problems related to marrow transplantation such as cytopenias; infectious complications; nutrition and electrolyte imbalance; renal, card...
and present thorough histories and physical exams will be evaluated. The student's verbal and written patient progress reports will also be evaluated daily at morning rounds. Faculty will monitor student progress and give ongoing feedback throughout the elective. No written examination will be given although an evaluation of the student's performance will be available at the end of each rotation.

**DIVISION OF INFECTIOUS DISEASES AND INTERNATIONAL MEDICINE**

<table>
<thead>
<tr>
<th>Periods</th>
<th>Pre-requisite</th>
<th>Sites &amp; Slots</th>
<th>Hours</th>
<th>Weeks</th>
</tr>
</thead>
<tbody>
<tr>
<td>MEL 8310: Infectious Diseases and International Medicine</td>
<td>1,2,3,4,5,6,8,9,10,11</td>
<td>BCC 7144 BCC 7184 3@TGH 2@TVAH 2@MCC</td>
<td>FT, 44 hr wk</td>
<td>2,4</td>
</tr>
</tbody>
</table>

**Objectives**

1. Provide fundamental information concerning techniques employed in diagnosing infectious diseases
2. Obtain an appreciation for the natural history of infectious disease so as to better understand whether therapy is affecting the course of disease in a given patient
3. Comprehend the process of selection of appropriate antimicrobial therapy

**Methods**

The clinical rotations conducted at Tampa General Hospital, Tampa
VA Hospital, and H. Lee Moffitt Cancer Center are structured to permit students to function, with guidance by advanced subspecialty residents and attending physicians, as consultants in infectious disease. In addition to participation in bedside consultative evaluation of patients and the presentation of findings on daily teaching rounds, students are required to employ standard textbooks, contemporary literature and laboratory data in an organized fashion to arrive at "best fit" diagnoses. Progress of patients will be assessed and recorded daily. Fellows and attendings will provide regular didactic teaching, and students will participate in the teaching activity by preparing and presenting a comprehensive review of an important clinical topic in infectious
diseases for a Division Conference. The student’s progress during the elective will be monitored during daily teaching rounds by the attending faculty.

**Evaluation**

Midway through the elective a formal evaluation process results in generation of written comments that are communicated to the student so that he/she can appreciate how his/her performance has been to that point. Daily, critical review of presentation of patient data will be incorporated in teaching rounds to provide guidance for the student to strengthen skills in those areas.

| MEL 8314: Tropical Medicine and Public Health Abroad | 1,2,3,4,5,6,7,8,9,10 | BCC 7144 | BCC 7184 | 2@USFMS | FT, 44 hr wk | 2,4 |
care in a foreign country with emphasis on tropical infectious diseases and epidemiology. An urban and rural hospital/clinic at a major medical school in Africa (Zimbabwe), India, or South America will be the location of the rotation. The student will learn to care for patients with acute and chronic parasitic and tropical bacterial and fungal infections as well as diseases common to all peoples. Interaction with the local clinicians will include joint lectures, direct supervised patient care, and observation of healthy and unhealthy behavior of the indigenous population. A USF faculty member with interest and expertise in tropical medicine or public health will provide the leadership and instruction for the group. At the end of the rotation, each participant will present a relevant topic.
concerning the diagnosis, treatment, or prevention of tropical diseases, or the epidemiology and control of major diseases of public health importance, and submit the report for publication.

Emergency medical insurance is required for all electives abroad.

MEL 8357: Infections in Transplant Medicine and Immunocompromised Hosts
Drs. Jose Montero, Todd Wills, Charurut Somboonwit, Beata Casanas and Sally Alrabaa

Objectives

| 1,2,3,4,5,6,7,8,9,10,11 | BCC 7144 BCC 7184 | 2@TGH | FT, 44 hr wk | 2,4 |
The goal of this rotation is to introduce the senior students to transplant medicine and its major complications specifically infections. The student will be able to see various viral, bacterial, fungal, and mycobacterial infections in various immunocompromised hosts and apply his/her basic knowledge of the immune system and its function to clinical practice. The student will develop skills in recognizing and diagnosing unique infections. Appropriate use of antimicrobial agents including knowledge of drug interactions between antimicrobials and immunosuppressive drugs will be demonstrated.

Evaluation
The evaluation process will be ongoing on a daily basis through constructive criticism to help students' perfect history taking, physical exam and guide them to use tests appropriately and formulate appropriate differential diagnosis. At the end of the rotation the attending physician will give an overall evaluation to the students as well as students will be given the opportunity to give suggestions to help incorporate students' needs into future rotations through this service.

MEL 8362: Infections in Cancer and Bone Marrow Transplant Patients
Dr. John Greene, Ana Paula Velez, Aliyah Baluch

<table>

</table>
An infectious disease approach to managing neutropenic patients, bone marrow transplant patients and patients with solid organ or hematologic cancers will be presented. The student will develop skills in managing patients with selected bacterial, fungal, and mycobacterial infections unique to this immuno-compromised population while working intimately with the microbiology lab. Appropriate use of antimicrobial agents including knowledge of therapeutic vs. toxic regimens will be emphasized. Also included will be critical care management of bone marrow transplant patients and other seriously ill cancer patients.
Midway through the elective a formal evaluation process results in the generation of written comments that are communicated to the student so that he/she can appreciate how his/her performance has been to that point. Daily, critical review of presentation of patient data will be incorporated into teaching rounds to provide guidance for the student to strengthen skills in those areas.

MEL 8363: Infections in the Intensive Care Unit
Drs. Jose Montero, Todd Wills, Charurut Somboon wit, and Beata Casanas, Sally Alrabaa
The goal of the course is to learn to recognize, treat, and prevent infectious complications in the critically ill patient. The student will participate in the initial consultative evaluation and will follow-up patients in the various ICU's at Tampa General Hospital. This will include trauma, postoperative, medically ill, and burn patients. The student will attend weekly lectures and participate in daily critical care rounds. A practical approach to antibiotic choices and effective use of diagnostic studies will be stressed.

**Evaluation**

The attending physicians will evaluate the student on a daily basis.
This elective will provide the student with a broad overview of the care of HIV-infected patients in an outpatient setting. The student will attend HIV clinic at the Hillsborough County Health Department daily and will participate directly in the evaluation of clinic patients. The student will formulate a plan of care for patients and present the plan to the attending physician. The problems encountered in clinic will be used to illustrate the principles of outpatient HIV care. In addition, the student will attend weekly lectures in which common opportunistic infections and HIV therapeutic s will be discussed. The student will also
have the option of spending some afternoons rounding on clinic patients who have been hospitalized at Tampa General Hospital, and may observe the HIV Clinical Research Division.

Evaluation

The student’s evaluation will be based on daily contributions during clinic and participation in weekly lectures.

<tr>
<th>DIVISION OF MEDICAL ETHICS AND HUMANITIES AND PALLIATIVE MEDICINE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Periods</td>
</tr>
<tr>
<td>---------</td>
</tr>
<tr>
<td>MDE 8053: Selected Topics Such as Aging, Global Concerns, and Disabilities</td>
</tr>
</tbody>
</table>
The object of this elective is to provide in-depth consideration of portrayals of aging and end-of-life issues using humanities tools. While students explore these issues in the medical text and in clinical experiences, this course provides very different perspectives that are intended to complement those experiences. Students choosing this course should expect to read four or more novels or plays, become familiar with several poems, ranging from Alfred Tennyson to May Sarton and Donald Hall, view at least 4 full length films, and gather from the arts specific works dealing with the course topic.

Faculty from the College of Fine Arts will provide seminar leadership and students will be required to present assigned interpretations and critiques of works to fellow participants.

The course is scheduled to allow for co-participation by MD and Masters students. The on-line class extends over a 3-month period while the MD class adheres to the traditional one-month format.
MDE 8054:
Social Problems in Medicine
Dr. Lois Nixon

The course involves an examination of cultural factors in the analysis of social problems in medicine as expressed in film, art, and literature. Focus is on the poor, racial minorities, women, homosexual s, the elderly, etc. Essentially the course focuses on nuances and complexities of the human condition. If attendance is a problem, students should not register for this course.

Topics that might be studied include:

1. Disability
2. Sociocultural barriers: language barriers, prejudice, cultural differences, gender issues and concerns
3. Policy issues for the physician: our national medical priorities (specialization vs. primary care, preventive vs. tertiary), abortion, sex education, health care reform, managed care
4. Aging
5. Emerging voices: other perceptions, other stories

Each student will be assigned to do specific reading assignments and several written responses to the fiction. In addition, elective groups will explore the course theme further by visiting special classes on main campus, going to see related exhibits at museums, and attending films (commercial or VCR). The course is interdisciplinary and requires completion of all assignments and thoughtful discussion.

<td>Students may arrange for independent study on topics relevant to human values in medicine. The faculty member who will supervise the study must approve a plan for such study. The plan will indicate the objectives of the study, the activities to be undertaken in pursuit of the objectives, and the means of evaluating the study. Relevant topics include religion in medicine, medical ethics, legal aspects of medical ethics, clinical ethics research, communication in medicine, medicine and literature, the history and/or philosophy of science, medicine and social problems, creative writing, the impact of culture on medicine and health, and cross culture experience. Faculty will assist students in locating appropriate faculty members to supervise their independent study.</td>

Students must commit to this course by emailing kbrown2@health.usf.edu no later than October 1st.

This month-long course is designed to introduce students to a broad examination of visions and voices occurring in various forms of the arts. Unlike most basic science classes, courses, and medical school tests, materials selected for this course emphasize the telling of a story from non-scientific, non-objective perspectives. Artists and writers have always been the record keepers of their society; separately and collectively they present unknowable, imprecise, and slippery aspects of humanity that can not be defined easily or measured with certainty.

Just as Steinbeck's classic novel, Grapes of Wrath, generated a broader awareness to the plight of migrants and poverty and the recent play, Wit, portrayed subjective insights to dying in a hospital setting, the assignments in this course employ a humanistic lens to reveal aspects of issues confronting individuals and/or groups in contemporary society.

Students will have first-hand experiences with theatre.
music, historical markers, available writers, art film selections, as well as docent-led museum visits and special lectures. Alzheimer's disease, aging concerns, depression, and gender perspectives are among the topics addressed in our assignments and seminars.

Upon completion, students will be able to understand and articulate the following:

1. Recognize and identify specific representations from the arts that extend and illuminate ranges of illness and suffering.
2. Evaluate the reasons for the production of specific works for today's audience as well as the effect it is likely to produce. Consider how these works complement the medical text.
3. Understand how catastrophic events (911) are responded to and interpreted by writers and artists.
4. Consider the historical place of Bellevue Hospital in medical history. Meet with the Bellevue Literary Review Editor.
5. Experience a full day of programming by faculty at the NYU Medical School. Hands-on experience provided for the NYU Literature/Medicine Database.

Optional one night excursion to Philadelphia

Note: MD Students and MBMH students will be admitted to this course.

Three weeks of course time occurs at USF, one week occurs in NYC. Students are responsible for all NYC expenses and travel arrangements.

DIVISION OF NEPHROLOGY AND HYPERTENSION

year medical student to the broad general principles of Clinical Nephrology. In essence, the student will be an acting intern who will, in collaboration with the renal house staff and clinical fellows, participate in the care of patients with a variety of renal and hypertensive problems. Adequate exposure to renal patients is achieved through inpatient consultations in the affiliated institutions and outpatient consultations and follow-up in the renal clinics and dialysis centers. The performance of the history and physical examination, formulation of plans for diagnosis and management, and the writing of orders for care of the patient will be the responsibility of the student who will function under supervision of the Nephrology attendings and fellows. The student will be exposed to the practice of medicine on a
A broad interdisciplinary service that involves dietitians, social workers, clinical nurse specialists, as well as the attending staff.

## DIVISION OF PULMONARY, CRITICAL CARE, AND SLEEP MEDICINE

<table>
<thead>

</tr>
</tbody>
</table>

This elective is designed to introduce students to the practice of sleep medicine in an outpatient and inpatient setting. Under the supervision of clinical faculty, students will have the opportunity to practice in a university or hospital clinic setting. Students will also round with the preceptors in the hospital. The student will have exposure to interpretation of sleep studies and observation of the overnight recordings.

### Objectives
1. List the diagnostic findings that are associated with high pressure told probably obstructive sleep apnea.

2. Compare and contrast central from obstructive sleep apnea.

3. Evaluate the business models that are necessary for successful outcomes in the treatment of patients in #1 & #2 above.
Methods

The trainee will see patients at the USF, VA and TGH Sleep clinics as well as inpatient consults. Trainees will participate in the Sleep Medicine conferences during their rotations. Trainees will be provided with the introduction to scoring of a sleep study as well as direct observation of a nocturnal recording. Upon completion of this elective, the trainee will have an understanding of the various things that can go wrong with patient's sleep in the middle of the night. Furthermore, they will have a plan developed as to the diagnostic and therapeutic approach to each of these disorders.

Evaluation
The trainee will be evaluated by the course director or his designee, at the end of the course, based on the clinical evaluations completed by all fellows and faculty who work with them. An in-service exam will assess some of the ACGME six core competencies.

Grades are determined by: 75% clinical evaluations and 25% by final examination.
1. Learn to evaluate a patient in the rheumatology clinic and perform an appropriate history and physical examination, design an appropriate differential diagnosis, and diagnostic and therapeutic plans for the more common systemic rheumatic and musculoskeletal diseases.

2. Recognize clinical, laboratory, and radiographic features of the more common rheumatologic and musculoskeletal diseases.

3. Understand and the pathophysiology of the common rheumatologic and musculoskeletal diseases.

4. Learn to perform knee and shoulder aspiration injection on simulation models, and have the opportunity to perform on patients in a clinical setting.
Didactics

Rheumatology Blackboard Website includes PowerPoints, links and interactive didactics for students, weekly Rheumatology conference with faculty and trainees, and Joint Injection Workshop with simulators.

Clinical experience

The student will have the opportunity to rotate with a variety of rheumatology faculty at sites including: USF Morsani Medical clinic, the James A. Haley VA Hospital Outpatient rheumatology clinic and inpatient rheumatology consult service, Tampa General Hospital rheumatology consult service, and 30th Street clinic. The students will be assigned to sites and faculty members in order to maximize the breadth of their clinical experience. The faculty will mentor the student during clinic sessions providing clinical teaching of rheumatologic differential diagnosis, evaluation, and management, and giving feedback on clinical skills. There are additional opportunities to have exposure to musculoskeletal ultrasound in the clinical setting.

Evaluation
The student will receive a final evaluation from the faculty preceptor with which they were assigned for the majority of their clinical experience. The student will also be evaluated on their PowerPoint presentation to faculty and trainees during the weekly rheumatology conference on a topic relevant to a patient seen in the clinical setting.

**MEL 8340:**

Pulmonary Disease

Dr. David Solomon and Faculty

<table>
<thead>
<tr>
<th>Objective</th>
<th>Topics</th>
<th>CCR 7144</th>
<th>CCR 7184</th>
<th>2 @ TVAM 2 @ TGH</th>
<th>FT, 44 hr wk</th>

<tr>
<td>1. Describe a history and physical examination as it relates to pulmonary disease</td>
<td>1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11</td>
<td></td>
<td></td>
<td></td>
<td>2, 4</td>
</tr>
</tbody>
</table>
2. Know what disorders and interpretations basic laboratory findings such as chest X-ray, CT scan, arterial blood gases, and pulmonary function tests.

3. Have an understanding of the common pulmonary disorders, including their diagnosis and treatment.
4. Have a working knowledge of pulmonary physiology, especially as it relates to respiratory failure and the use of respiratory therapy (ventilators, oxygen, etc.)

5. Have a working knowledge of a number of emergent conditions seen in the Medical Intensive Care Unit (Moffitt; not at TVAH or TGH for this course).

**Methods**

The student will receive training at one of our clinical institutions by evaluating patients, rounding with the consultation team, and participation in conferences. A didactic lecture series may also be given.

**Evaluation**

The student will be evaluated on a daily and ongoing basis by the consultant attending.

**At TGH:** The student will work as part of the pulmonary consult team. There is a separate MICU team at TGH so critical care medicine will not be a component of the TGH experience for this course.

**At TVAH:** The student will work as part of the pulmonary consult team. There is a separate MICU team staffed by students participating in the senior clerkship. This site is therefore unavailable for a critical care rotation.

</tr>
</tbody>
</table>
Rheumatic diseases are complex multi-system diseases. All subspecialties and general internists need to be familiar with the clinical aspects of these diseases. Musculoskeletal complaints, including arthritis, low back pain, sprains, and strains, are the most common reasons for patients to consult their physicians. Our clinics have an excellent balance of both common and rare musculoskeletal rheumatic diseases.

Objectives
Be able to obtain history and perform the physical examination appropriate for rheumatic disease patients. Be able to order and interpret pertinent X-rays and laboratory studies. Gain an understanding of the pathogenesis, differential diagnosis, and treatment of musculoskeletal conditions.

**Methods**
The trainee will see patients at the VA and USF Clinics Medical Clinics and on the consultative services of Tampa General Hospital, Tampa VA Hospital or H. Lee Moffitt Cancer Center. Trainees will also participate in specialty conferences during their elective rotation. Upon completion of this elective, the trainee should understand the principles of diagnosis and management of patients who have rheumatic diseases.

**Evaluation**

The trainee will work closely with the attending rheumatologist who will provide the assessment.

The student will undertake a specific research project in collaboration with one of the faculty and will participate in research conferences and seminars. Current research areas include studies of the molecular basis for various disease states, such as cardiovascular disease, infectious disease, neurodegenerative disease; molecular virology; host-parasite interactions; molecular immunology; metabolic regulation; and molecular and cellular biology.

**Objective**

The objective of this course is to introduce the student to modern methods and concepts of biomedical research.

**Evaluation**
Evaluation of the student will be based on the mastery of a set of research techniques, the utilization of these to investigate a research problem and the collection, evaluation, and interpretation of these experimental findings.

MEL 9999I: Independent Study in Molecular Medicine, Faculty

The overall objective of Independent Study in Molecular Medicine is to provide a student with a fundamental understanding of biological and genetic principles basic to pathological processes; to gain understanding of the molecular mechanisms that underlie the cellular aberrations in a clinical disorder; and to understand, synthesize, and incorporate the fundamental principles learned as they apply to medical research. The student will gain from this course a broad and thorough understanding of the principles that underlie a
A major clinical condition that perturbs the functioning of normal cells, tissues and organs and that may influence development. The knowledge gained from this course is intended to aid the student in developing clinically relevant research questions, and to understand the process by which basic research translates to the design of specific molecular tools for disease diagnosis, treatment, prognosis, and prevention. A student may choose a course of study in any one of the following areas: Metabolic disorders, Immunologic and Infection disorders, Neurologic disorders, Cancer, or Organ System based disorders.

### Molecular Pharmacology and Physiology

This elective will provide the medical student with a broad and comprehensive educational experience in Physical Medicine and Rehabilitation. There will be instruction in the evaluation and rehabilitation of a wide range of medical disability conditions including musculoskeletal problems, head injuries, spinal cord injuries, strokes, amputees, chronic pain, geriatrics, and cardiac rehabilitation. In addition, students will be exposed to physical, occupational, speech, audiology, vocational, recreational, and kinesiological therapies. There will be instruction in functional assessments of all types of physical disabilities and in the diagnostic use of electromyography for muscle and neurological disorders. Overall, the educational experience will offer a practical approach to those patients with disabilities. This will benefit all medical students regardless of their primary area of interest. Visitation at other rehabilitation centers is available.

Evaluation
Educational objectives, a learning booklet, and expected learning outcomes with a bibliography will be provided. Evaluation will be based on attendance and demonstration that the educational objectives have been met. An honors grade requires the student to do a case presentation at a weekly conference.

**MEL 8671:** Senior Elective in Inpatient General Neurology
Drs. Rossitza Chichkova and Eugeniu Muntean

Fourth-year medical students spend a four-week elective in the Tampa General Hospital and/or the James A. Haley Veteran Affairs Hospital. The elective is under the supervision of a Neurology attending. Students become an integral part of a team that cares of patients with various neurological diseases. There are opportunities for participating in research projects.

**Pre-requisite**
Completion of core, third year Neurology (BCC 7154) and Internal Medicine (BCC 7144) rotations.

| 1,2,3,4,5,6,7,8,9,10,11 | None. Recommend: BCC 7119, BCC 7154 | 1@TGH 1@TVAH | FT, 40 hr wk | 2,4 |
Objectives

1. Master skills in obtaining neurological history and examination.
2. Actively participate in discussions regarding diagnosis.
6. Develop readiness for transition into residency.
7. Learn to perform lumbar punctures.
8. Learn basics of EEG and EMG/NCES.

Learning Outcomes

Students will see the patients at the James A. Haley VA Hospital and Tampa General Hospital. Upon completion of this elective, students should understand the principles of diagnosis and management of general neurological disorders.
EVALUATION

Students will be evaluated by the course director at the end of the course, based largely on clinical evaluations completed by all residents and faculty who work with them.

MEL 8673: Senior Elective in Epilepsy

Drs. Selim Benbadis, Al Bezorg, A. Tom Frontera, and S. Parrish Winesett

Fourth-year medical students may spend a four-week elective in the Tampa General Hospital Comprehensive Epilepsy Program. Students will spend a few days at the pediatric epilepsy clinic and video-EEG monitoring unit at All Children’s Hospital based on availability.

Pre-requisite

Completion of core, third year Neurology (BCC 7154) and Internal Medicine (BCC 7144) rotations.

If the student’s medical school does not offer a core Neurology rotation, completion of a Neurology elective prior to application for the Epilepsy elective is required.

Objectives

1. Students should understand the differential diagnosis of epilepsy
2. Students should understand the difference between the different types of seizures and epilepsy syndromes
3. Students should know the basics of video-EEG monitoring including its role and limitations
4. Students will become familiar with identifying refractory epilepsy patients and will familiarize themselves with
5. Students will learn the presurgical approach to patients with refractory focal epilepsies

Learning Outcomes

Students will see the patients at TGH and the Morsani Center. Upon completion of this elective, students should understand

Evaluation

Students will be evaluated by the course director at the end of the course, based largely on clinical evaluations complete
### MEL 8674:
Senior Elective in Headache and Pain Medicine

Drs. Kavita Kalidas, Nina Tsakadze, A. Carvel Gipson, and Headache and Pain Fellows

Fourth-year medical students may spend a four-week elective participating in the Headache and Pain Clinics at Tampa General Hospital, 12,3,4,5,6,7,8,9,10,11.

**Pre-requisite**

Completion of core, third year Neurology (BCC 7154) and Internal Medicine (BCC 7144) rotations.

**Objectives**

1. Manage the chronicity of headaches and the development of migraines
2. Obtain a comprehensive medical and neurological history as well as a detailed examination
3. Differentiate a variety of elements implicated in headache management
4. Understand the role of neurotoxins, trigger point injections, and peripheral nerve blockade in the management of headaches
5. Understand the role of Neuromuscular Re-education/Biofeedback, physical therapy, occupational therapy, a

**Learning Outcomes**

Students will see patients at the Headache and Pain Clinics at the Tampa General Hospital Rehabilitation Building and will participate in research projects are available. Participation in Didactic Lectures and Journal Clubs is mandatory.

**Evaluation**

Students will be evaluated by the course director at the end of the course, based largely on clinical evaluations complete.

### MEL 8675:
Senior Elective in Movement Disorders

Drs. Theresa Zesiewicz, Robert Hauser, and Juan Sanchez-Ramos

All students enrolled in this elective must email Dr. Zesiewicz at tzesiewi@health.usf.edu at the start of the academic year.

FT, 40 hr/wk

2,4
This elective will provide instruction in the diagnosis and treatment of movement disorders. Students will rotate with each of the movement disorders physicians (Dr. Żesiewicz, Sanchez-Ramos, and Hauser) one day per week. Students will also observe a movement disorder neurosurgeon, either in the OR or in clinic, one day per week (Drs. Smith and Vale). The diagnosis, treatment, and pathophysiology of movement disorders will be emphasized. Movement disorders will consist of Parkinson's disease, Essential tremor, Dystonia, Ataxia, Tic disorders, Huntington's Disease, and others. Students will have the opportunity to participate in evaluation and management of patients with a variety of movement disorders including Parkinson’s disease, Atypical Parkinsonism, Essential tremor, dystonia, and chorea. Students may also have the opportunity to observe clinical trial visits and injections of botulinum toxin for movement disorders.

Objectives
1. Diagnose movement disorders, including Parkinson's disease, Essential Tremor, Dystonia, Ataxia, and Huntington's disease.

Learning Outcomes

After completion of this elective, students should understand the principles of diagnosis and management of patients who have movement disorders.
Students will be evaluated by the course director at the end of the course, based largely on clinical evaluations completed by all residents and faculty who work with them.
### MEL 8677:
**Outpatient Neurology**

Drs. Theresa Zesiewicz, Charles Brok, Angel Cruz, Robert Hauser, A. Carvel Gibson, Juan Sanchez Ramos, Kavita Kalidas, Nina Tsakadze, Derrick Robertson, Rossitza Chichkova, Selim Benbadis, and Lara Katzin

With the course director's assistance, the student will construct a calendar of outpatient experiences which can include any or all of the following Clinics: Alzheimer's Disease; brain tumor; cancer pain; epilepsy; general neurology; headache and chronic pain; independent neurological evaluation; neuro-muscular; multiple sclerosis; Parkinson's Disease; and stroke. Selected reading will be advised. The course is designed to assist students who want a career in primary care or neurology as they prepare for outpatient delivery of care. The department may assign students to USF Clinics, the James A. Haley or Bay Pines Veteran's Hospitals, Moffitt Cancer Center, Harbourside Medical Tower, or Tampa General Hospital to complete this elective.

This elective is designed to give fourth-year students more extensive exposure to the practice of Vascular Neurology. Under the supervision of clinical faculty, students will have the opportunity to evaluate patients with known or suspected stroke syndromes in hospital and ambulatory clinical environments. Students will round with the Stroke Team in the hospital on the Vascular Neurology Service and see patients in the outpatient stroke clinics under the supervision of a Vascular Neurology Attending. The elective will provide students with a better understanding of the dimension of Stroke, which is a leading cause of disability and the third leading cause of death in the United States. Students will also get exposure to interventional neurology as it pertains to the management of ischemic stroke and subarachnoid hemorrhage and gain experience in critical care neurology as it pertains to the management of patients with ischemic stroke, intracerebral hemorrhage and subarachnoid hemorrhage.

Objectives
In the heterogonous system of rocks and minerals to differentiate them from non-rock micrometics.
2. Apply principles of evidence-based medicine to care for cardiovascular disorders and management.
3. Evaluate the purpose of laboratory and nourishing against diseases in cerebral arteries.
6. Understand the principles of management of acute hemorrhagic stroke.

Learning Outcomes

Students will see patients at Tampa General Hospital and the South Tampa Center for Advanced Health Care. Upon completion of this elective, students should understand the principles of diagnosis and management of patients who have vascular neurological disorders.

Evaluation

Students will be evaluated by the course director at the end of the course, based largely on clinical evaluations completed by all residents and faculty who work with them.

Drs. Charles Brock, Angell Cruz, Robert Hauser, Juan Sanchez Ramos, Maria-Carmen Wilson, Theresa Zesiewicz, Selim Benbadis

This elective course is designed for the student who is interested in furthering his/her neurological knowledge by concentrating in Parkinson's Disease, neuro-muscular disease, and stroke. The elective is offered with approval of the chairman.

Evaluation

Grades will be determined by faculty evaluation and resulting paper.
MEL 9999N: Independent Study in Neurology

Faculty

This elective course will benefit the student who wants to develop a knowledge and skills base in addition to that provided by BCC 7154. The student will select an area(s) of neurology sub-specialty. Selected reading, patient contact, and clinical investigation will occur under the direct supervision of a faculty mentor. The areas available are: multiple sclerosis, Alzheimer’s Disease, neuro-muscular disease, neuro-oncology, and neurotoxicology. In most cases student involvement in therapeutic drug trials is possible.

MEL 73200:
Externship in Ob/Gyn
Dr. James Mayer

This elective is provided for USF fourth year medical students to have the opportunity to gain further training in an off-campus setting in an approved elective site. The elective course should be consistent with a knowledge base towards Women’s Healthcare. All externships must be pre-approved in writing by the Ob/Gyn Director at USF on the externship application form.

**Evaluation**

The student will be required to submit a brief summary of the experience and its relative content to the field of Ob/Gyn.

**MEL 7411: Senior Elective in Ob/Gyn**

Dr. James Mayer

This elective is offered to fourth year medical students to obtain an advanced clinical exposure in the medical and surgical aspects of Obstetrics and Gynecology. Students will take an active role in all phases of patient care, diagnostics and management. This elective will cover both the inpatient and outpatient settings. This elective will be offered at Tampa General Hospital, Women's Health Park at Genesis, USF Medical Clinics: South Tampa Center and Morsani Center for Advanced Healthcare.

**Evaluation**

The assigned faculty member and resident will be responsible for completing an evaluation on the student's clinical performance.
This elective is offered to introduce the fourth year medical students to a subspecialty within the field of Obstetrics and Gynecology.

### Objectives

1. Provide an introduction and appreciation to an Ob/Gyn sub-specialty
2. Develop student independent interest and research in the sub-specialty
3. Provide the student with a clinical interactive opportunity with a sub-specialty attending

### Evaluation

The division director of each sub-specialty will be responsible for evaluating the student.

### MEL 8421: Ob/Gyn Acting Internship

Drs. James Mayer and Jerome Yankowitz

THIS ELECTIVE IS NOT AVAILABLE TO VISITING STUDENTS.

The Ob/Gyn Acting Internship is a month long concentrated clinical experience at Tampa General Hospital in the Bayshore Women's Hospital. The Acting Intern will be responsible for the care of the obstetrical patient under the supervision of the Labor and Delivery faculty members. The Acting Intern will triage, admit, and deliver those patients to whom they have been assigned. The Acting Intern will be expected to demonstrate the independence of developing an assessment and plan for patient care to be presented, reviewed, and agreed upon by the medical team. They will also be expected to demonstrate responsibility and professionalism to patients, team, and staff.

### Objectives

1. Advance and mature the knowledge base and clinical skills in the care of the obstetrical patient
2. Demonstrate the independence of developing an assessment and plan for patient care to be presented, reviewed, and agreed upon by the medical team
3. Acknowledge and demonstrate responsibility and professionalism to patients, team, and staff
4. Actively participate in all patient care directly or indirectly, attempting to meet patient care and team needs at all times
5. Share knowledge, support, and compassion to patients, team, and staff
6. Reflect, study, read, and be prepared, demonstrating growth by the next shift
7. Ask for and appreciate constructive feedback
8. Have fun

### Evaluation

Formal evaluation forms will be completed by the Labor and Delivery faculty and resident team members.

### MEL 9999: Independent Study in Obstetrics and Gynecology

Dr. James Mayer and Faculty Preceptor

This elective is used to schedule individually tailored and approved activities not covered by other electives. This includes research and special programs of study in individual interest areas.

**NOTE:** Independent Study Application must be reviewed and signed by Dr. James Mayer before the start of the rotation in order to receive credit.

photocoagulation, intraocular injections, scleral buckles, vitrectomies, and radiation plaque therapy. For those interested in ophthalmology as a career, this course is an opportunity to learn the most advanced diagnostic and therapeutic techniques used in eye care today. Those interested in family practice, internal medicine, geriatrics, and endocrinology will see the retinal pathology most often encountered in their future specialty and learn the resources that are available for evaluation and treatment. In the last week of the rotation, the student is required to present and discuss a patient they have evaluated during the course at the departmental case conference.

**Evaluation**
Evaluation will be determined by daily performance observed during the 4-week elective period. On the first day of the rotation, report to Stacy Parker DeRaps at the USF Eye Institute.
MEL 8509: Glaucoma
Drs. David Richards, Lisa Gamell, and Carla Bourne.

This course is designed for students interested in ophthalmology as a career. Glaucoma is one of the most common clinical problems ophthalmologists encounter. Its diagnosis and treatment will be taught through participation in clinics and surgery. Attendance at departmental conferences is expected as is independent reading. Participation in a research project is encouraged. During the last week of the rotation, presentation of an interesting patient or the results of a research project at the departmental teaching conference is required. On the first day of the rotation, report to Stacy Parker DeRaps in the USF Eye Institute.

| Year 3: 7,8,5,10,11 | 1@USF-MS | FT, 40 hr wk | 2,4 |
MEL 9999E: Independent Study in Ophthalmology
Dr. David Richards and departmental faculty

This course is designed for students interested in ophthalmology research. An interview with Dr. David Richards is required at least 30 days in advance of the start of the rotation to determine if the student will be accepted. The student will work directly with a faculty member doing research in ophthalmology. Independent reading and research will be required. The number of slots per year will be limited. On the first day of the rotation, report to Stacy Parker DeRaps in the USF Eye Institute.

This elective will give prospective orthopaedic residents exposure with the Program Director, Dr. G. Douglas Letson, and the Department Chair, Dr. David Leffers. Students will also have the opportunity to work with the faculty and residents of the Department of Orthopaedics & Sports Medicine. Students on this rotation will experience the clinical and surgical treatment of benign and malignant disease, sports medicine injuries and trauma of the musculoskeletal system. Students will spend one week at the Moffitt Cancer Center-Sarcoma Department, one week at the Morsani Center for Advanced Healthcare-Sports Medicine Clinic, one week at Tampa General Hospital-Orthopaedic Trauma, and one week at the James A. Haley Veterans Administration General Orthopaedics.
curry different, properly managed, and properly accounted for in order to track progress.
3. Understand and why x-rays are important for circumstantial and in situ tests. Deform structure and understand diagrams of aspects and in conjunction to

4. Questions:
5. Explain the treatment of simple and complex fractures, bone infection and complications.
6. Demonstrate an understanding of the management of complex tissue injuries as they relate to the musculoskeletal system.
7. Demonstrate knowledge of the elements of the orthopaedic examination of the injured patient.

8. Understand the multidisciplinary role of the Orthopaedic Surgeon, Physician Assistant.
Nurse Operating Room Team
Physical Therapist and Athletic Trainers in the provision of coordinated, safe and high quality orthopaedic care

Learning outcomes
Students will participate in the weekly orthopaedic core lecture series on Friday mornings from 7 am -11 am. Upon completion of this elective, the trainee should understand the principles of diagnosis and management of patients with musculoskeletal trauma, abnormalities or diseases.

**Evaluation**

Evaluations will be done on an individual basis by the clinical preceptors and will be based on patient interaction, case presentations, medical plans, and documentation.

Any interested student MUST get final approval from the Education Coordinator, Ann Joyce, to plan the elective. Ideally, this should be done prior to the start of the academic year but MUST OCCUR AT LEAST 1 MONTH PRIOR TO THE START OF THE ELECTIVE. There are additional compliance forms from UCH and Moffitt that the student MUST complete before their rotation.
MEL 9999U: Independent Study in Orthopaedics

The purpose of this elective is to provide students the flexibility of pursuing creative scholarly projects/research under the direct supervision of a mentoring faculty member. Prior to scheduling this course, students must meet with their preceptor in order to identify and define their independent study. It is expected that clear goals and objectives will be established in advance of registering for this course. After determining a course of study, the student must obtain signatures from both their faculty preceptor and the Education Coordinator, Ann Joyce. Assessment will be based on attainment of goals and objectives set at the beginning of the project by the faculty member and student.
practice of otolaryngology. Students will participate in the preoperative study of patients in private offices and will follow them upon their admission to the hospital. They will assist at the operative procedures on selected patients and will be expected to follow their postoperative course. Opportunity will also be afforded to carry out long-range observation of postoperative results in patients who have previously been treated for otolaryngological problems.

By the completion of the elective, all students will be able to demonstrate proficiency in the otolaryngological head and neck exam and will have obtained experience and/or understanding of a variety of ear, nose, and throat disorders such as acute respiratory obstruction, hearing loss, dizziness, sinusitis, external otitis, otitis media, modern diagnosis and management of head and neck cancer,
maxillofacial trauma, epistaxis, hoarseness, and dysphasia. The objective is to provide greater exposure to the field of otolaryngology than what is possible in the basic surgical course, and to give further opportunity for first hand experience in this area for students who are considering ultimate specialization in this field.

**Evaluation**

The formal evaluation will be prepared by otolaryngology faculty based on the following: fund of medical knowledge, quality of assessment and presentation, clinical judgment as indicated by rationale of didactic and management plans, attitude and rapport with patients and families and subjective elements of interpersonal relationship, motivation, and ability.
MEL 9999T: Independent Study Otolaryngology

This course is designed to provide the student interested in otolaryngology as a career an opportunity to carry out an in-depth study of a selected topic in otolaryngology that is of interest to the student. The student will work directly with a faculty member. Assessment will be based on attainment of goals and objectives set at the beginning of the project by the faculty member and student. The student is required to obtain the signature of the faculty mentor prior to registering for the course.

This course entails supervised regional dissection, discussion of the clinical relevance of the identified structures, participation in gross anatomy laboratory sessions and independent case-based presentations.

Objectives
This course is designed to provide senior students with the opportunity to perform an in-depth study of anatomy in relation to surgical fields and other clinically relevant disciplines such as radiology and emergency medicine. It enables students to master the delicate relationships of anatomical structures through supervised step-by-step dissections. It is expected that prospective students will be able to correlate structural organization of human body to the interpretation of disease processes. Students will be able to participate in teaching anatomy to junior medical students in an interactive laboratory environment.

Evaluation
Evaluation is based on completion of the assigned dissection and active participation in anatomy laboratory teaching. Minimum of 5 PowerPoint presentations detailing a series of clinical vignettes with complete history, laboratory values, differential diagnosis and discussion are required. These vignettes must emphasize the importance of structural relationships of the affected organs and the anatomic basis of the conditions discussed.

Students should contact Dr. Arslan to receive permission in advance and to insure proper coordination.
Track

Required for Radiology
One of the options for Emergency Medicine, and Family Medicine

Note: This course is also listed under Internal Medicine.

MEL 9999A:
Independent Study in Anatomy
Dr. Arslan and Faculty

This course entails collaborative study to explore innovative ideas which are applicable to basic and clinical sciences.

Objectives

1,2,3,4,5,6,7,8,9,10,11

none

No limit@USF-MS

FT, variable

2,4
This elective enables prospective students to develop collaborative independent plan of study based on the anatomical sciences. Students are expected to explore research topics in order to discover or expand on the possible anatomic basis for disease processes that have not yet been fully explored.

**Evaluation**

The nature of this elective necessitates that variable methods of evaluation will be used to periodically assess the viability and applicability of the results obtained from the investigated areas of study. Students should be prepared to present their findings in the form of a PowerPoint presentation.
Students should contact Dr. Arslan to receive permission in advance and to insure proper coordination.

The objective of this course is to strengthen the students in areas of anatomic pathology relevant to the practice of clinical medicine. The student will observe the daily activities of laboratory technicians and pathologists' assistants, attend autopsies, and examine surgical specimens under supervision. He/she will be expected to attend all Pathology Conferences and participate in microscopic sign-out sessions. Particular attention will be given to correlation between clinical information and pathologic findings.

**Evaluation**

The student will be evaluated by the Staff Pathologists using a standardized Student Evaluation Form.

For all pathology electives, please report by 8:00 AM on the first scheduled day. The James A. Haley VA Hospital can only accommodate one student per month, regardless of rotation.

BMS 7667: Elective in Laboratory Medicine

Objective

1.3.4.5.6.7.8.9.10.11 Year 4 status 1@T-VAH FT, 44 hr wk 2.4
The objective of this elective is to acquaint the student with appropriate technical and interpretative laboratory information important to the practice of medicine. Current economic emphasis places even greater importance on the proper use of the laboratory by the physician.

The student will participate under supervision in several areas of the clinical laboratory of his/her choice such as clinical chemistry, microbiology, hematology, etc. The student will have the opportunity to work closely with the senior and resident staff. Major concentration will be on appropriate interpretative laboratory tests. The student will be expected to attend pathology conferences.

**Evaluation**

The staff pathologists will evaluate the student using a standardized student evaluation form.

For all pathology electives, please report by 8:00 AM on the first scheduled day. The James A. Haley VA Hospital can only accommodate one student per month, regardless of rotation.
When scheduling Pathology, students must contact the individuals below in advance to secure permission:

**USF-MS:**
- Linda Carr (813) 974-0510

**TGH:**
- Tanisha Battle (813) 974-8364
Objectives

1. Learn to correlate autopsy findings with clinical information and information derived from scene investigations
2. Learn to complete death certificates in a manner acceptable to the Office of Vital Statistics and the World Health Organization
3. Learn anatomy pertinent to the future clinical practice specialty of the student
4. Gain an understanding of the working relationships between forensic pathologists and other professionals, including those in law enforcement, the Office of the State Attorney,

Methods

Year 4 status 1@HCME, space permitting FT, 44 hr wk 2, 4
- Assist with autopsies on the bodies of persons dead from suicide, accident, and natural disease by performing dissection and medical chart review under the supervision of staff pathologists.
- Review pertinent medical literature for selected cases.
- Accompany staff during testimony under oath at criminal and civil trials and at depositions.
- Accompany staff during death scene investigations (evening and night call-out optional)
- Participate in departmental conferences. These comprise a working case conference thrice weekly, a pending (cause-of-death opinion deferred to further study) case conference weekly, a photo review conference weekly, and a fixed brain and heart cutting conference weekly.
- Present an informal talk on a topic of personal interest related to autopsy pathology or anatomy for extra credit.
Please check for availability prior to registration.

For all pathology electives, please report by 8:00 AM on the first scheduled day. The James A. Haley VA Hospital can only accommodate one student per month, regardless of rotation.

NOTE:
Approval, dates, and duration of course must be arranged with a faculty mentor prior to registering.

Objectives

The primary objectives of this course are to teach the basic principles of investigative work with emphasis on:

1. Formulation of a specific hypothesis
2. Critical analysis of pertinent literature
3. Development of an appropriate experimental design to test the hypothesis
4. Appreciation of methodological limitations and pitfalls
5. Analysis and interpretation of experimental data

Evaluation

- Monitoring the student's interest, initiative, and progress through daily interactions and at weekly research conferences
- Evaluating the student's problem solving ability and diligence in the performance of realistic research assignments
- Evaluating the student's judgment and critical approach in assigned library work as well as in analyzing and interpreting experimental data
The student will conduct investigative work in human or experimental pathology under the supervision of the senior investigator. These studies will use primarily morphologic and molecular techniques as well as animal models.

The staff pathologists will evaluate the student using a standardized student evaluation form.

For all pathology electives, please report by 8:00 AM on the first scheduled day. The James A. Haley VA Hospital can only accommodate one student per month, regardless of rotation.

Cardiovascular disease may be congenital or acquired and may exist in a spectrum throughout life from the womb to adulthood. The All Children’s Heart Institute is a comprehensive group of sub-specialty cardiologists that cover this spectrum of disease through the practice of: general cardiology, non-invasive (echocardiography), perinatal cardiology, advanced cardiac imaging (3-D ECHO, MRI, CT), invasive cardiology, electrophysiology, heart failure/transplant, pulmonary hypertension, preventative cardiology, and adult congenital heart disease. The goal of this rotation will be to teach core principles of cardiovascular disease and allow students exposure to the broad spectrum of cardiology sub-specialty care that occurs within the division. A board certified/eligible Pediatric Cardiologist will supervise patient care during the elective rotation. Clinical and/or basic research projects are also available for interested students.

Clinical cardiology:
1.

Undstand the evatiation and treatment of the arm, chst pain, palpitations, dizziess, and syncope.

2.

Undstanining the evatiation and treatment of various forms
Understand the basic principles of electrocardiograms and be able to interpret and have an understanding of basic arrhythmias.
Clinically these objectives will be achieved by the following tasks:

1. Outpatient clinical diagnostic

2. Patient care services

3. Hospital inpatient and outpatient care services (i.e., Al, Chi, Hop, and Multipath)
on I.C.U., and other considerations regarding emergency
operations.

Sub-specialties – all students will work at least one of the following:

pehach
3.
3. first sentence.

Each student should know the important details for the course and the limits of academic integrity. In a dilemma, each student should know the important details for the course and the limits of academic integrity.

### Acting Internship: Inpatient Pediatrics
Drs. Rodriguez, Patel, Maldonado, and Staff
| MEL 7551: Acting Internship: Inpatient Pediatrics | 1,2,3,4,5,6,7,8,9,10,11 | Year 4 status | 1@TGH | FT, 44 hr wk | 4 |
The inpatient pediatric elective is presented to give the student an experience in the management of children with problems requiring hospitalization. The student will have the responsibility for the evaluation and treatment of a limited number of pediatric cases. The student will care for these patients as an acting intern in consultation with a senior member of the pediatric house staff. The student will take call with the ward team every fourth night.

Objectives
1. The student should be able to conduct a history and physical examination in a concise and logical fashion and define the child's problems.
2. The student should be aware of the diagnostic and therapeutic possibilities and be able to use them when appropriate.
3. The student should develop increasing clinical responsibility and judgment in dealing with hospitalized children and their families.

4. The student should gain familiarity with...
macerated crop is known to affect growth and yield in various crops, such as cotton, as well as
serious losses in corn, sorghum, soybean, and some
arabian...
The student should be able to give the indications for admission to the hospital for children with various diagnostic and therapeutic problems.

Physician Contact: Dr. Rodriguez
Contact Number: (813) 259-8752
This elective will aid students in their initial approach to pediatric renal disease, understanding the mechanisms of renal injury and evaluation and therapy of renal diseases. Tutorials are offered at least twice a week, covering topics such as proteinuria, hematuria, developmental anomalies, urinary tract infection, acute and chronic glomerulonephritis, nephrotic syndrome, acute and chronic renal failure, lupus erythematosus, hypertension, dialysis, and transplantation. Other topics may also be covered as determined by student preference.

The students will provide inpatient (TGH and/or ACH) and outpatient (USF Clinics) care under close faculty supervision. The student is expected to either provide a discussion of one selected topic or present a patient management case towards the end of the rotation.

| TGH Contact Number: | (813) 259-8760 | 1@TGH 1@ACH | FT, 44 hr wk | 2, 4 |
This elective is for a clinical rotation in the neonatal intensive care unit at Tampa General Hospital.

**Objective**

The objective of this elective is the development of clinical expertise in the management of disorders of the neonate. The clinical clerk will be an integral part of the neonatal management team with participation in conferences, attending rounds, and providing clinical care under close faculty and neonatal fellow supervision.

**Evaluation**

Evaluation of the student’s performance will be made by observing development of his/her clinical expertise and the use of informal quizzes.
Students should report to the NICU on the 4th floor at TGH. Please call the Neonatology Office at (813) 844-3437 at least one week in advance to confirm your rotation. Contact Dr. Sutko at (813) 844-8296 at 8 a.m. on the first day of the rotation if you need further information.

MEL 7596: Pediatric Diabetes and Metabolic Disease
Drs. Boilepalli, Rodriguez, and Shulman

This elective is designed to provide clinical exposure to children with insulin dependent diabetes as they appear in the clinic. The activity will be based at the USF Diabetes Center at the Carol and Frank Morsani Center for Advanced Healthcare on the USF campus. Special emphasis will be placed upon diabetes care management including insulin dose adjustment, nutrition, and psychosocial aspects of the disease and will be supervised by the Diabetes Center team including pediatric endocrinologists, nutritionists, psychologists, and others. The Diabetes Center staff will provide specific education about the techniques required for home management of type 1 diabetes.

BCC 7144 or BCC 7184 1@MCAH FT, 44 hr wk 4
Objectives

The objective is to provide clinical exposure to childhood diabetes and improve understanding of the basic clinical disorder and the problems associated with routine home management.

Interested students must contact the director, Dr. Rodriguez at (813) 396-2580, prior to selecting this elective. Those interested in more intense exposure to children with a chronic disease should contact Dr. Rodriguez to learn the dates of camp sessions for children with diabetes.
This rotation allows the student to experience the broad range of primary pediatric care issues in the USF Health Pediatric Clinic, located at 17 Davis Pediatric Clinic. Students will sometimes also work at HealthPark Pediatrics. The student is expected to improve skills of obtaining histories, performing physical examinations, and developing thorough differential diagnoses and management plans. Primary care issues are discussed daily. Each student will present a topic relevant to ambulatory pediatrics at the end of the rotation. Attendance at Pediatric Grand Rounds and scheduled conferences is required.

**Objective**

Improve knowledge of general outpatient pediatrics and improved skills in performing histories, physicals, assessments and developing appropriate management plans.

Please contact Dr. Sharon Dabrow via email at sdabrow@health.usf.edu at least four weeks prior to beginning this elective.
Contact Number: (813) 259-8752
Hours: 8:30-5 pm each day. Morning report 8-8:30 optional. Noon conference 12-1:00 required.

MEL 8555: All Children's Hospital Acting Internship: In-patient Pediatrics

Pediatric Hospitalists

The senior medical student will serve as an "acting intern" with the resident staff assigned to the inpatient medical teaching service of All Children's Hospital. He/She will interview and examine patients and participate in the planning and execution of diagnostic and therapeutic programs under the supervision of residents and faculty in pediatrics. The student will participate actively in teaching rounds, journal clubs, and seminars as a junior house staff member.

Objective

Offer the student a period of intensive exposure to inpatient general pediatrics by permitting the student maximal responsibility for patient care in a supervised setting.

Evaluation

1,2,3,4,5,6,7,8,9,10,11
Year 4 status
2@ACH
FT, 44 hr wk
4
The student's written histories and physical examinations, problem list, and plans of evaluation and therapy will be reviewed by the attending faculty, the director of the Inpatient Service and senior residents of All Children's Hospital, each of whom will meet with the student frequently. The quality of these records as well as the student's daily activities at rounds and conferences will form the basis of the evaluation.

Night call is no more frequent than every 4th night. Contact Number: 813-259-8720.

MEL 8556: Acquired Immunodeficiency Syndrome
Drs. Rodriguez, Lujan-Zilberman and Emmanuel
The senior medical student will participate in both inpatient and outpatient clinical duties involving HIV-infected children and adolescents. The student will perform history and physical examinations on infants born to infected mothers and on HIV-infected children. Diagnostic and therapeutic programs will be executed with the supervision of the Pediatric Infectious Diseases faculty. The principles of laboratory evaluation of the HIV-infected child will be demonstrated in the clinical immunology laboratory. For students interested in participating in clinical and/or basic research, participation in small pilot projects is encouraged under the mentorship of a faculty member. The student will participate in teaching rounds, journal clubs, and seminars with the faculty, and will rotate at the ACH Clinic and the CMS clinic in Tampa.

Objective

Offer the student a period of intense exposure to HIV infection in infants, children, and adolescents with participation in a supervised outpatient, inpatient, and laboratory setting.
The student's history and physical examinations, generation of problem lists, and plans for evaluation and treatment will be reviewed frequently by the attending faculty. The quality of these records as well as the student's daily activities at rounds and clinics and conferences will form the basis of the evaluation.

No night is call required.

The medical student should report to Dr. Carina Rodriguez in the Division of Pediatric Infectious Diseases. Contact Number: (813) 259-8800.

MEL 8559: Pediatric Rural or Migrant Health (AHEC)
Faculty and Staff at Suncoast Community Health Centers (Ruskin, Dover, Plant City, Family Medical Center (Dade City), Premier Community Healthcare Group (Dade City and Zephyrhills), Manatee County Rural Health Services (Bradenton), Community Health Centers of Pinellas (Saint Petersburg), and DeSoto County Health Department (Arcadia)

| 1-2-3-4-5-6-7-8-9-10-11 | BCC 7144 or BCC 7184 | 1@CF | FT, 44 hr wk | 4 |
PRIOR APPROVAL REQUIRED
Please contact Anne Maynard, MPH, CHES at amaynard@health.usf.edu or (813) 574-3507 at least six weeks prior to registering for this elective.

This elective is designed to familiarize the student with general outpatient pediatric care in a rural migrant health center. All students will be under the supervision of a precepting physician participating in well childcare as well as acute walk-in care. This rotation will provide students with a better understanding of rural medicine and the tremendous health needs of rural and migrant populations. In certain settings, many patients are Spanish speaking, and students will have the opportunity to work with interpreters. Depending on the site selected, Gulfcoast North or Gulfcoast South AHECs may provide housing.

**Evaluation**

The clinician preceptors will evaluate students on an individual basis by. Evaluations will be based on patient interaction, presentations, medical plans, and documentation.
<p>| At certain sites this elective is available to USF students only. The Department of Pediatrics and Gulfcoast North or Gulfcoast South AHEC will make the final arrangements. |  |  |  |</p>

The student will be involved in the management of patients with pediatric hematology and oncology disorders, both in the inpatient and outpatient settings. For inpatient services, the student will participate in the AM rounds and assist with diagnostic procedures and therapy planning. Students are encouraged to study the basics of hematopoiesis and cancer chemotherapy. Written histories and physical examinations and plans for evaluation and treatment will be reviewed with the attending physician. In the outpatient setting, the student will actively participate in interviewing and examining newly referred and follow-up patients. The student will attend the weekly multidisciplinary patient care and teaching rounds and monthly tumor board. By the end of the period, the student is expected to be able to know basics of work up and care for the pediatric hematology oncology patients.

**Objective**

Introduce the student to the clinical aspects of hematologic and oncologic disease in children.

**Contact Numbers:**
TGH (813) 259-8713;
ACH 813-259-8725
Objective

The goal of this elective is to acquaint the student with genetic and metabolic disorders in pediatrics: diagnostic evaluation, differential diagnosis, inheritance, management and counseling. Students will typically attend Genetics/Metabolic Clinics Monday, Tuesday, and Thursday at CMS on campus and occasional outreach CMS clinics. Students will also participate in inpatient consultations. During the month, students may also have the opportunity for exposure to prenatal and cancer genetics cases. Students will be responsible for either the extensive work up of 1-2 new patients per clinic or see re-visits as scheduled. They will also be expected to give a 10-15 minute presentation at the end of the rotation on a selected topic.

Physician Contact: Dr. Prijoles
Phone: (813) 259-8772
Objectives

The goal of this challenging elective is to familiarize the student with the clinical aspects of child development. Participating in patient evaluations via observation and direct contact and interacting with various members of a multidisciplinary team will facilitate an understanding of the diversity of the field. Students will learn to administer basic screening tests and to assess the many aspects of development, which contribute to diagnosis and intervention. In addition to "hands-on" training, weekly didactics will provide teaching in the basic areas of normal, delayed, and disordered child development, including neurological and genetic disorders, intellectual disability, autism, and specific learning disabilities. This elective incorporates a wide variety of clinic environments, with exposure to NICU follow-up, age Birth-3 Early Intervention Program, and the school-age population. The objectives of this elective can be met via a research track, a clinical track, or a literature review/writing track.
Contact: Dr. Mary Pavan at mpavan@health.usf.edu at least 4 weeks prior to the start of the elective.
Phone: (727) 767-8230

| MEL 8573: Pediatric Allergy and Clinical Immunology | Drs. Perez, Dorsey, Sleasman, Sher, and Sriaroon | 1,2,3,4,5,6,7,8,9,10,11 | BCC 7144 or BCC 7184 | 2@ACH | FT, 44 hr wk | 2, 4 |
This elective is designed to give the student experience on both the outpatient and inpatient Pediatric Allergy and Immunology services of All Children's Hospital in St. Petersburg, Florida. The participant will assist in the diagnosis, treatment, and management of patients with a broad spectrum of immunologic, allergic, and rheumatologic diseases. The elective will emphasize a logical approach to clinical immunologic problems, interpretation of immunology laboratory tests, and the treatment of allergic and immune disorders including autoimmunity. The student will learn about the performance and interpretation of allergy skin testing, spirometry, tympanometry, rhinoscopy, food challenge procedures, immunotherapy to aeroallergens, and drug desensitization. Students will gain experience in current treatments of immunodeficiency disease.

**Objective**

Offer the student an intensive exposure to clinical allergy immunology through supervised responsibility for patient care.
The student should report to the Division of Allergy/Immunology, Children’s Research Institute (Band-Aid Building) at 8:30 AM at ACH.

The PICU is a multidisciplinary unit providing acute care for pediatric patients with a wide variety of medical and surgical problems. The goals and objectives for this elective are intentionally broad to allow for a learning experience in meeting the student's individual needs. Students will learn to utilize a physiologic-based organ system derived approach to patient problems. Integration of multiple healthcare providers is emphasized. Students are given the responsibility for patient care under the direct supervision of the PICU resident or attending faculty. Educational goals will be met through discussions on teaching rounds, didactic presentations on aspects of pediatric critical care medicine, and self-directed study on individual patients. Final evaluations will be based on the guidelines presented on the USF COM MSIV evaluation form and the degree to which the student has met his/her stated objectives.

Objectives
The student will learn to use physical exam skills, laboratory data, and radiographic data to assess the physiological stability and severity of illnesses in pediatric patients.
2. The study will learn to incorporate at a with critical thinking skills to both as equivalents on coordination and instutement.
3. The student will learn to appreciate the utility and usefulness of both invasive and non-invasive physiological monitoring and support.

MEL 8579:
Pediatric Gastroenterology, Hepatology and Nutrition
Drs. McClanathan and Wilsey's Group

1,2,3,4,5,6,7,8,9,10,11 Year 4 status 1@ACH FT 40 hr wk 4
The Pediatric Gastroenterology/Nutrition Department is a very active clinical service. The student will participate in the evaluation and management of children with gastrointestinal disease. The student will interview and examine outpatients and inpatients referred for pediatric gastrointestinal disorders. The student will assist in planning the diagnostic and therapeutic program for these patients. He/she will observe diagnostic modalities such as endoscopy, manometry, esophageal dilation, suction rectal biopsies, and pH probes. The student will also participate in clinical gastrointestinal rounds and GI Journal Club.

There will be one slot available at Drs. McClenathan & Wilsey’s Group (ACH/Tampa Office).

Evaluation

The student will be expected to read about the diseases of their clinic and hospital patients. Grading for the course will be a reflection of the student’s participation and daily activities.

Contact Kelly at 813-259-8725 prior to the first day of the rotation.
The Pediatric Emergency Medicine elective at All Children's Hospital and/or Tampa General Hospital is designed to give an in-depth exposure to the identification and management of acutely ill and injured children. Students are integrated into the health care team and participate directly in all aspects of patient care for medical/surgical/trauma emergencies including history, physical examination, management options, evaluation of laboratory and radiographic studies, utilization of consultants, decision making, and disposition. Under the supervision of an attending physician, students are involved in technical procedures including suturing, immobilization, splints, phlebotomy, IVs, ABGs, lumbar puncture, bladder tap, central venous access, arterial lines, endotracheal intubation, chest tube insertion, thoracentesis, and cardiopulmonary resuscitation. The emergency center environment features a computerized tracking system and exposes students to this modality for expediting patient care.
Students participate in daily didactic conferences, radiology rounds, chart review, plus monthly mock code scenarios designed to integrate with syllabus material. By the completion of the rotation, students will be able to identify an acutely ill or injured child and develop and implement an appropriate management plan.

This elective in pediatric infectious disease is a clinical preceptorship with the Infectious Disease team. The majority of time is spent on inpatient consults. The student is exposed to all areas of the hospital since consults are answered in critical care areas, the general pediatric wards, and NICU. Inpatient consultations on the Tampa rotation will be performed at St. Joseph’s Children’s Hospital. In the ambulatory setting, the student will have exposure to the outpatient ID clinic and the pediatric/adolescent HIV clinic. Microbiologic laboratory utilization and antibiotic therapy are emphasized during the rotation. Informal teaching conferences are held frequently. The student is expected to participate in weekly journal club, presenting an article each week.

No night call is required.

For the Tampa rotation, the medical student should report to Dr. Dale Bergamo in the Division of Pediatric Infectious Diseases. Please contact the department at least two weeks prior to starting elective.

Contact Number: (813) 259-8860
For the ACH rotation, the medical student should report to Drs. Juan Dumois and David Berman at ACH Pediatric Infectious Disease.

This elective is designed to introduce senior medical students to the field of adolescent medicine. Students will be able to see and care for adolescents, ages 12 to 21 years, in a variety of outpatient settings. Adolescent clinics will afford students the opportunity to provide primary and specialty care to teenagers in a clinic setting, while students can also participate in adolescent health care in school-based clinics, at both high school and college settings. The experience will be supplemented with time spent at the Healthy Weight Clinic, learning about the care of teens with eating disorders; at the Hillsborough County Health Department and USF HIV clinic, learning about sexually transmitted infections; at various mental health sites, learning about mental health and substance abuse problems in adolescents; and at a variety of other settings, learning about sports medicine.

This elective offers an opportunity for fourth year medical students and immunology residents to have hands-on experience using modern techniques in the laboratory. These include:

- 1,2,3,4,5,6,7,8,9,10,11
- BCC 7144 or BCC 7184
- 2@ACH
- FT, 44 hr wk
- 4
1. Learning to use ELISA and immunobased assays to quantify soluble proteins and cytokines
2. Application of flow cytometry analysis to measure immune cell activation and differentiation, in particular cytokines and immunoresponses to antigens.
3. Understanding the concept of geographic presentation in the clinical setting.
The student should report to the Division of Allergy / Immunology, Children’s Research Institute (Band-Aid Building) at 8:30 AM at ACH.

MEL 8587: Sports Medicine
Drs. Eaton and Grogan, Alex Atamirando, Scott Brickett, Andy Chasanoff, Kim Morris

The student in this elective will have the opportunity to work with orthopedic/sports medicine specialists, physical therapists, and certified athletic trainers. The sports medicine experience includes sports medicine clinics, hands-on field experience with a certified athletic trainer at the University of Tampa, familiarity with rehabilitation modalities at a physical therapy center, and game coverage opportunities. In addition, students might have exposure to sports for children with disabilities.

Objectives

4, 5, 6, 7, 8, 9, 10, 11  BCC 7144 or BCC 7184  1@USFHealth  FT, 44 hr wk  2, 4
This elective is designed to provide the students, as general practitioners, with the background to comfortably evaluate, treat, diagnose, and selectively refer athletic injuries. The educational objectives include:

1. Sports participation at a normal or athletic level
2. Evaluation and treatment of athletic injuries
3. Diagnostic skills
4. Selective referral of athletic injuries
2. Evaluation, diagnosis, and mechanisms of communicative and neurological disorders both in the field and in the clinical setting.
Family with available physical therapy and rehabilitation models.
The schedule of this rotation is more varied, with educational opportunities occurring in the evening and weekends. This would allow for exposure to the variety of lectures and conferences offered by the USF Pediatrics residency, as well as for some weekdays completely free from clinical responsibilities.

Please contact Dr. Ronald Sutsko at (813) 844-8296 at least four weeks prior to beginning this elective.
All students are eligible to apply for the Honors Course in Pediatrics. The Honors Program curriculum includes a creative scholarly project with the preceptor of the student's choice. The project and registration for the course must be approved by Dr. Sutsko or his designee. In addition, a clinical experience pertinent to the scholarly activity of choice is required during the four-week block. An interest in pursuing a career in Pediatrics or Internal Medicine-Pediatrics is suggested for this elective. Depending on their preceptor selection, students may rotate at All Children's Hospital, the USF Medical Clinics, or Tampa General Hospital.

Objectives
1. Scholarly project presentation at noon conference or publication.

2. Exposure to related clinical experience.

**Evaluation**

An evaluation form will be submitted by the preceptor with whom the student will directly work.

Prior approval of this elective is required. Students should contact Dr. Sutsko at least four weeks prior to registering to discuss topics of interest and to identify preceptor.

This elective is NOT available to visiting students.
MEL 8629: Pediatric Neuropsychiatry
Dr. Tanya Murphy

This elective is designed to introduce senior medical students to the identification, evaluation, and treatment of children and adolescents with neurodevelopmental and psychiatric disorders. Under the supervision of Dr. Murphy and her faculty, students will be able to observe and participate in a comprehensive neuropsychiatric assessment, evidence based medication management, and cognitive behavioral therapy. A multidisciplinary approach to assessment and treatment will be emphasized. This clinic is specialized as it serves children and adolescents with Obsessive-Compulsive disorder, Tourette syndrome, Trichotillomania, Separation anxiety, Phobias, Pediatric Autoimmune Neuropsychiatric Disorders associated with Streptococcal Infections (PANDAS), and Autism spectrum disorders. Students will have the opportunity to participate in Occupational and Physical therapy assessments for youth with developmental disorder. Students will also have the opportunity to participate in therapy sessions.
focusing on habit reversal for tics or exposure and response prevention for OCD treatment. In addition, this clinic has a number of clinical studies examining both psychopharmacology and therapeutic treatments for various diagnoses.

**Objectives**

1. Develop skills in the evaluation, diagnosis, treatment, and management of children and adolescents with psychiatric disorders.
1. Recognize the conditions and how to screen for
2. Recognize conditions and how to screen for

suggestions
comprehensive assessments
3. Become familiar with common presenting cases for the patient population.

4. Recognize the complexities and strengths of the patient population as an asset to collaboration and treatment.
4. procedure, counsel, recovery, pieces, school, and the family.
Learning educational, therapeutic, and counseling modalities for special needs.
Observe speech, audiology, and occupational therapy screenings.

**Evaluation**

Faculty observation and evaluation of student-patient interactions, case presentations, journal article discussions, and written assessments.

Interested students must contact Dr. Murphy at least one month prior to the start of the elective.
**MEL 9999K: Independent Study Pediatrics**

The purpose of this elective is to give students the opportunity to work directly with a mentoring faculty member. At least 30 days prior to registering for this elective, students must meet with their preceptor to determine a course of study with goals and objectives for the course period.

This elective is NOT available to visiting students.

This elective gives the student the unique opportunity to participate in the evaluation, diagnosis, and the short-term treatment planning for patients in the JVA Emergency Room. Under close supervision by the faculty and staff of this service, the student gains experience in interviewing, diagnosing, and managing the acute psychiatric patient. The student sees a very wide range of pathology from adjustment disorders to frank psychoses to complex multisystem illnesses. Students work with the attending psychiatrists as well as the Director of the Service, Dr. Barbara Lubrano. Students will participate in the decision making process performing a risk assessment to determine if the patient requires inpatient admission or create a plan for outpatient care. Directed readings will be provided.

**Objectives**
2. A comprehensive assessment for dangerousness inclusive of suicide and violence risk.

3. Use of the MoCHA to screen for cognitive deficits.
Different problems where questions further in severity as same and treatments so out patients. Appropriately utilize medication and recognition major side effects.
6. Demonstrate apprise of brief in terms of claus in terms of crisis in terms of medical and psychological rest in, etc.
Know and believe lists the elements required for confidentiality, involuntarily holographic and surgically animal using the Florid most and Mal Health Code.
8. Identify appropriate sources of consultation information to inform the psychosocial evaluation (i.e., family, pharmacy, A.L.F., naturopathic consultation registry etc.).
- Direct observation by supervising faculty of interviewing and PE skills (at least weekly).
- Review of medical documentation by faculty supervising the rotation (daily).
- 10 minute oral presentation on a topic of interest.

The grade will be compromised of 75% clinical evaluation and 25% oral presentation on a topic.

This elective is designed to offer advanced experiences in the evaluation, treatment, and rehabilitation of alcoholic and substance abuse patients, and the assessment and diagnosis management of other co-existing psychiatric disorders. The student will participate in a therapeutic community treatment program for chemical dependency, have direct clinical responsibilities for patient care and interact with available community resources for chemically dependent patients. The student will have the opportunity to participate in ongoing addiction research activities.

Objectives
Enhanced diagnostic skills in chemical dependency and associated medical and psychiatric disorders
Learning division, group, and community techniques for the clinical education level how to facilitate the acquisition of clinical data points.
Evalu\ndation

The supervising faculty will evaluate the student's clinical performance according to the elective objectives. In addition, the student will be required to prepare a written summary of the elective experience including a description of clinical and academic activities, a self-evaluation of what the student learned in the elective, and a critique of his/her elective experience.

This elective is designed to provide interested students with clinical and didactic training in outpatient psychiatry. The student will have an opportunity to develop greater diagnostic and management skills in varied outpatient settings including the University Psychiatry Center Outpatient Clinic and the James A. Haley Tampa VA Hospital. Specific experiences can include the Adult Evaluation Clinic, the Memory Disorders Clinic, and the Child Evaluation Clinic. An opportunity to gain increased understanding of crisis intervention in an outpatient setting at the Tampa VA Hospital is also available.

Objectives
1. Welcome or briefing notes involving pertinent but both formal and practical problems in various settings.
3. Development - depth understanding of psychology
Gaingraterfamilywithavarietyofpsychomotorproblemsindicatinggrowinggroup,folk,admiral,otherbabyboyskilinkupwithpsychomotordevelopments.

1. Learn how to evaluate and diagnose psychiatric disorders and common behavioral disorders in children.
2. Learning mechanisms of psychological problems in curing behavioral problems
Becomo family with comunity at home to help children with psyhatric and behavioral problems

Becomo family with the general practice of children's psychiatry and psychology
The supervising faculty will evaluate the student's clinical performance according to the elective objectives. In addition, the student will be required to prepare a written summary of the elective experience including a description of clinical and academic activities, a self-evaluation of what the student learned in the elective, and a critique of his/her elective experience.
This elective is designed to provide interested senior medical students with an advanced experience in the evaluation and treatment of Memory Disorder Clinic patients. The psychiatric evaluation will allow the senior student to become proficient in the diagnostic work-up of the patient with a memory complaint and with the memory disorders work-up which includes neuromaging studies of the brain, laboratory studies, neuropsychological testing and psychosocial evaluation. Students will gain expertise in geriatric medicine, geriatric psychiatry and the differential diagnosis of patients with memory complaints and psychiatric disorders.

The student will spend the majority of the elective at the Johnnie B. Byrd, Sr., Alzheimer’s Center and Research Institute. The student may be involved at other facilities such as an Assisted Living Facility or nursing home as relates to the geriatric population. Supervision and seminars will complement these clinical activities.

**Objectives**
1. Become familiar with the multidisciplinary assessment of elderly patients.

2. Develop specialized diagnostic skills for identifying and differentiating among the multiple causes of dementia.
Lear how to integrate chips and molecules of the el
derly

Because familiarity with without illustrate

coincidence in the care of the el
derly
The student's clinical performance will be evaluated by the supervising faculty according to the elective objectives. In addition, the student will be required to prepare a written summary of the elective experience including a description of clinical and academic activities, a self-evaluation of what he/she learned, and a critique of his/her elective experience.
**MEL 8611: Acting Internship in Psychiatry: Advanced Adult Inpatient Psychiatry**

Drs. J. White, D. Sanchez, C. Logan, R. Velasco, and Medical Staff

This elective is designed to provide advanced clinical and didactic training in inpatient psychiatry. Students will participate as a “sub-intern” on an inpatient psychiatric ward. Students are expected to have a small case load of patients that they actively manage, taking on primary responsibility for the patient’s care in conjunction with the supervising faculty. Students will perform the history and physical for patients being admitted to the hospital and follow the patient on a daily throughout the hospital course. Students will learn to construct a biopsychosocial formulation of the patient’s presenting problems along with providing acute, intense biological, psychocological and social interventions during the hospitalization. Students will also learn to compose discharge summaries. Close supervision, seminars, and independent study will complement the clinical activities.

| Objectives |

1. Development and understanding psychology
2. Become skilled in the use of psychological medication
3. Gain a greater familiarity with a variety of psychotherapy modalities including individual, group, and family psychotherapy.
4. Becomemore skilled in the interviewing of psychiatric patients

Evaluatation

The supervising faculty will evaluate the student’s clinical performance according to the elective objectives. In addition, the student will be required to prepare a written summary of the elective experience including a description of clinical and academic activities, a self-evaluation of what the student learned in the elective, and a critique of his/her elective experience.

MEL 8612: Geriatric Psychiatry
Drs. J. Fils, M. Schoenberg, J. Stewart, J. Hashimie, R. Velasco, and Medical Staff

| none | 1@T-VAH, 1@UPC | FT, 44 hr wk | 2, 4 |
This elective is designed to offer advanced experience in the evaluation, treatment, and rehabilitation of elderly patients with psychiatric disorders. Students can participate in both inpatient and outpatient geriatric psychiatry care. Students will have clinical responsibility for diagnosis, treatment, and rehabilitation of elderly psychiatry patients. Supervision, seminars, and independent study will complement the clinical activities.

**Objectives**

1. Become familiar with the multidisciplinary assessment of elderly patients.
4. Become familiar with utilization of community resources in the care of the elderly.

**Evaluation**

The supervising faculty will evaluate the student's clinical performance according to the elective objectives. In addition, the student will be required to prepare a written summary of the elective experience including a description of clinical and academic activities, a self-evaluation of what the student learned in the elective, and a critique of his/her elective experience.
This elective is designed to provide students with a greater understanding of the interface between psychiatry and medical illness in the pediatric and adult populations. Students will assist the consultation team in interviewing medical/surgical patients at Tampa General Hospital. Students will be asked to evaluate patients and ascertain how the patient's medical illness is affected by psychological factors. They will be exposed to a wide range of psychopathology including mood disorders, conversion disorders, psychotic disorders, delirium, dementias, and other organic illnesses.

Objectives
1. Become familiar with psychiatric diagnoses in both the adult and child populations.
2. Improve the understanding of baby performing in a season of cultural medical general patients.
3. Learn to be part of a consultation liaison team and be able to work with members of other medical teams and other disciplines.

Evaluation

Supervising faculty will evaluate the student's clinical performance according to the elective objectives. In addition, the student will be required to evaluate the rotation as a learning experience.
This elective is designed to introduce senior students to the use of various forms of neural stimulation in the treatment of psychiatric disorders. Under the supervision of clinical faculty, students will have the opportunity to practice in a university neural stimulation clinic. Students will participate in the initial evaluation of patients for neural stimulation. Students will also take part in the neural stimulation treatment of suitable patients. This elective will provide students with a better understanding of the current use of neural stimulation for the treatment of psychiatric disorders.

Objectives
1. Familiz the study with the multivariable methods for numerical simulation if the physical characteristics differ in dimensions for treatment by numerical simulation.

4. Compare the treatment response of neural stimulation to other treatment methods.
5. Evaluation new points for usability for deep brain stimulation, transcranial magnetic stimulation, and electrophysiological therapy.
The trainee will see patients at the South Tampa Center Neurotherapies Clinic, Tampa General Hospital, and other related settings. Trainees will be provided with a training packet prior to the start of the elective pertaining to neurostimulation. Upon completion of these electives, trainees should understand the principles of neurostimulation, selection of appropriate patients and the implementation of neurostimulation treatment plan.

**Evaluation**

The trainee will work closely with the Neurostimulation Attending who will provide the assessment.
This elective is designed to provide students with a greater understanding of the interface between psychiatry and medical illness in the pediatric and adult populations. Students will assist the consultation team in interviewing medical/surgical patients at Tampa General Hospital. Students will be asked to evaluate patients and ascertain how the patient's medical illness is affected by psychological factors. They will be exposed to a wide range of psychopathology including mood disorders, conversion disorders, psychotic disorders, delirium, dementias, and other organic illnesses.

Objectives
Become familiar with psychiatric diagnoses in both adult and child populations. Improve psychosocial skills by performing role-playing exercises with medical residents.
Evaluation

Supervising faculty will evaluate the student's performance according to the elective objectives. In addition, the student will be required to evaluate the rotation as a learning experience.

MEL 8628: Seminar in Neuropsychology
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11
none
2@TGH
FT, 40 hr wk
2.4
Drs. Mike Schoenberg, Michelle Mattingly, and Francisco Fernandez

This elective is designed to provide interested senior medical students with an overview of neuropsychology, clinical neuropsychiatry, and behavioral neurology. Advanced training and exposure to neuropsychology will be offered. Students will have the opportunity to be involved in individual and team evaluations of patients with cognitive and behavioral disorders due to known or suspected neurological disease. The student will be an integral part of the evaluation team obtaining exposure on how to identify neuropsychological issues and problems, conducting bedside neuropsychological evaluations, obtaining collateral information from patients and families related to neuropsychological dysfunction, and exposure to the principals and practice of evidenced based neuropsychology practice. Interface with psychiatry, neurology, and neurological surgery will be common.

The student may choose to complete the elective primarily at the USF South Campus Center or at the University Psychiatry Center. Students with an interest in research...
may participate in ongoing laboratory research with epilepsy or traumatic brain injury or Alzheimer’s disease/Mild Cognitive Impairment (MCI). Opportunities to publish in peer-reviewed journals can be made available.

Objectives

1. Become more skilled in the evaluation of patients with neurological and psychological dysfunction due to known or suspected disease.
2. Increased understanding in the field of psychology and neuroscience of brain-behavior relationships. Systematic clinical training and dedicated education.
4. Become familiar with evidence-based neuropsychology practices and identify when more thorough neuropsychological evaluation is necessary to improve patient care.
Become involved in an understanding of collaborative, interdisciplinary research. Understand the basis for research methods and statistics and develop expertise.
in dat a nal ysis.

This invariant (both basic and clinical) will, in turn, serve as a model for pros e s ocal c arers.
Learning Outcomes
The trainee will see patients at the USF South Tampa Center Neuropsychology Clinic and/or Neuropsychology Clinic at the USF main campus. Trainees will be provided with a training packet prior to the start of the elective pertaining to neuropsychology. Upon completion of this elective, trainees should understand the principles of neuropsychology as a science and a discipline, how to complete a basic bedside neuropsychological evaluation, and how to provide appropriate multidisciplinary referrals for further evaluation and treatment.

**Evaluation**

The trainee will work closely with Neuropsychology Attendings who will provide the assessment.

**MEL 8664: Psychiatric Research**

Drs. F. Kozel, C. Santana, Y. Bannon, Brian Giunta, Jamie Fernandez, Gabriel de Erausquin, and Faculty

- Year 4 status: 1@UPC, 1@T-VAH
- FT, 44 hr wk
This elective is designed to enable the advanced student to become acquainted with the methodological aspects of behavioral medicine in basic neuroscience and their application in psychiatry and medicine. Opportunities exist in both basic science and clinical research areas including molecular genetics, neuroimmunology and cognitive medicine. Each student will participate in an ongoing research project and/or an individual tutorial during this time under faculty supervision and review and will evaluate the literature that pertains to his/her chosen topic.

Objectives
1. Increase the knowledge of psychiatry and behavioral medicine in an area of particular interest to the student

2. Become familiar with research methodology
3.

Evaluation
The research supervisor will evaluate the student’s research performance according to the elective objectives. The student will also be expected to prepare a written summary of the research project including an appropriate review of the relevant literature and a description of the student’s research activities. In addition, the student will provide the elective supervisor with a written critique of his/her elective experience.

Students must obtain permission from the department (the Director of Undergraduate Education in psychiatry or Faculty supervisor for the rotation) PRIOR to scheduling this elective.

**MEL 9999Y: Independent Study in Psychiatry**
Dr. Francisco Fernandez

Course of study will be determined by Faculty member and student. Example areas of study include psychopharmacology, neuropsychiatry, psychotherapy, child psychiatry, forensic psychiatry, and cognition, memory and aging. Students must obtain permission from the supervising faculty and the Chair of the Department PRIOR to scheduling this elective.
BMS 8178: Human Cross-Sectional Anatomy
Drs. Summer Decker and Todd Hazelton

This elective is designed to provide students with a self study program in normal human cross sectional imaging with emphasis on anatomy as it relates to medical imaging techniques such as computed tomography and magnetic resonance imaging. Topics covered during the elective include cross-sectional imaging of the brain, head and neck, spine, upper and lower limbs, thorax, abdomen, and pelvis. With special approval by one of the course directors, students interested in focused learning of the cross sectional anatomy of a specific body region may select the two week elective. Any student interested in a focused self study program in a particular area of cross sectional anatomy must meet with one of the course co-directors at least one month prior to beginning of the elective to determine the course of study. Special approval is required for a 2 week version of this elective.
2. the muscles could set the upper power and lower extremities as well, abduct, and perform on the affected sides as well as the contralateral and ipsilateral sides. In CT and MRI
A midterm examination (50% of grade) will cover the cross sectional anatomy of the brain, head and neck, and spine, and a final examination (50% of grade) will cover the cross sectional anatomy of the upper and lower extremities, as well as the chest, abdomen, and pelvis.

Objectives

On this elective, the medical student will obtain:

1. An understanding of the indications for advanced neuroimaging (CT, MRI, CTA, MRA)
A fundamental understanding of basic engineering principles, especially with respect to power transfer and its potential for mechanical and architectural structures.
Theabilitytoudiscussthemostcommonreasonsforlonggestes
5. A study on understanding of technical guidance and interpretation for career guidance and digital procedures.

Methods
The trainee will review neuroimaging studies with neuroimaging faculty and diagnostic radiology housestaff at the USF South Tampa Center for Advanced Healthcare and at Tampa General Hospital. The trainee will also participate in neuroimaging conferences during their elective period. The trainee will also have the opportunity to view neuroangiography and neurointerventional procedures at Tampa General Hospital. Upon completion of this elective, the training should understand the role of imaging in the diagnosis of neuropathology and have a basic understanding of imaging diagnosis of neuropathology on computed tomography and magnetic resonance imaging.

**Evaluation**

The trainee will work closely with the attending neuroradiologists and housestaff who will provide the assessment of performance.

This elective is designed to introduce senior students to the practice of musculoskeletal imaging, including conventional radiography, computed tomography, magnetic resonance imaging, and imaging-guided procedures. During this rotation, students will spend time with faculty and housestaff in the Imaging Center at the USF Morsani Center for Advanced Healthcare. This elective will provide students with a better understanding of the role of imaging and diagnostic procedures in disorders of the musculoskeletal system. Students will have the opportunity to attend musculoskeletal imaging lectures and conferences at USF, Tampa General Hospital, and the H. Lee Moffitt Cancer Center.

Objectives

On this elective, the senior medical student will obtain:
1. An understating of the important decision-making factors for andavedicular muscleuk (ultrarapid, CTratherapy, and MRI)
3. The ability to categorize and organize data such as rhum, theolonomy, etc.
4. The ability to discuss the most common characters...
Methods
The trainee will review and musculoskeletal imaging studies with musculoskeletal imaging faculty and housestaff at the USF Morsani Center for Advanced Healthcare. The trainee will also participate in musculoskeletal and orthopedic imaging conferences during their elective period. A presentation on a topic in musculoskeletal imaging will be required. Upon completion of this elective, the training should understand the role of imaging in the diagnosis of musculoskeletal pathology and have a basic understanding of imaging diagnosis of musculoskeletal pathology on radiography, computed tomography, and magnetic resonance imaging.

**Evaluation**

The trainee will work closely with the attending musculoskeletal radiologists and housestaff who will provide the assessment of performance.

---

**MEL 8704: Diagnostic Radiology**

Dr. Todd Hazelton

| 1, 3, 4, 5, 6, 7, 8, 9, 10, 11 | Year 4 status | 7@TGH | FT, 44 hr wk | 4 |
This elective is designed to provide an introduction to diagnostic radiology for medical students to develop basic imaging interpretation skills for clinically important pathology and to provide a foundational knowledge of imaging algorithms for common clinical presentations.

Objectives

1. Students will develop a basic understanding of radiation safety and the risks of radiation exposure to patients, become
Family with a history of radiation exposure, and some families with methods used to reduce radiation exposure.
2. Students should be able to choose the radiological test that is most appropriate for the most common clinical presentations encountered in medical practice.

3. Regardless of your plan

The trainee will rotate through the following subspecialty areas of diagnostic radiology: body imaging, cardiopulmonary radiology, fluoroscopy, musculoskeletal radiology, interventional radiology, nuclear medicine, neuroradiology, and ultrasound. On these rotations, the student will review diagnostic imaging studies with radiology faculty and housestaff at Tampa General Hospital and at the USF Morsani Center for Advanced Healthcare. Didactic lectures covering major topics in diagnostic radiology will be provided. Through assigned readings, students will gain knowledge of basic radiology imaging strategies for common clinical presentations. A PowerPoint presentation by the student on a topic in diagnostic radiology will be required. Upon completion of this elective, the student should understand the role of imaging in medical diagnosis and have a basic understanding of the imaging diagnosis of pathology on radiography, computed tomography, and magnetic resonance imaging.

Evaluation
The trainee will work closely with attending diagnostic radiologists and housestaff who will provide assessment of performance. A final examination consisting of both written questions and images will cover the reading assignments, didactic lectures, and important imaging diagnoses.

MEL 8707: Cardiothoracic Radiology
Dr. Carlos Rojas

This elective is designed to introduce senior students to the practice of cardiac and pulmonary imaging, including radiography, computed tomography, magnetic resonance imaging, and interventional chest procedures. During this rotation, students will spend time with faculty and housestaff at Tampa General Hospital. This elective will provide students with a better understanding of the role of imaging and diagnostic procedures in disorders of the heart, mediastinum, pleura, airways and lungs.

Objectives

On this elective, the medical student will obtain:

1. Understanding the indications for advanced cardiac and thoracic imaging (HRCT of the lungs, SPECT of the heart and lungs, and cardio vascular MRI).
2. A fundamental understanding of basic cadet ortho imaging with respect to the normal anatomy and sectional imaging
3. The article discusses the most common pathologies in the chest
The trainee will review cardiothoracic imaging studies with faculty and diagnostic radiology housestaff at Tampa General Hospital. The trainee will also have the opportunity to view thoracic interventional procedures at Tampa General Hospital. Upon completion of this elective, the training should understand the role of imaging in the diagnosis of chest pathology and have a basic understanding of imaging diagnosis of chest diseases on radiography, computed tomography, and magnetic resonance imaging. At the end of the elective, the trainee will give a 10-minute presentation on an interested case encountered during the rotation.

**Evaluation**

The trainee will work closely with the attending radiologists and housestaff who will provide the assessment of performance.

MEL 8711: Body Imaging
Dr. Raj Kedar

| 1,2,3,4,5,6,7,8,9,10,11 | Year 4 status | 1@TGH | FT, 40 hr wk | 2,4 |
This elective is designed to introduce senior students to the practice of abdominal imaging, including ultrasound, computed tomography, magnetic resonance imaging, and interventional body procedures. During this rotation, students will spend time with faculty and housestaff at Tampa General Hospital. This elective will provide students with a better understanding of the role of cross-sectional imaging and diagnostic procedures in disorders of the abdomen and pelvis.

Objectives

On this elective, the senior medical student will obtain:

1. A basic technical understanding of ultrasound, CT, and MRI
2. Understanding the indications for ultrasound as well as body CT and MRI
3. A fundamental understanding of basic body imaging with the spectrometer in normal anatomy and cross-sectional imaging.
The artificial intelligence of the body mechanism and pelvic viscera.
The trainee will review body imaging studies with faculty and diagnostic radiology housestaff at Tampa General Hospital. The trainee will also have the opportunity to view body interventional procedures at Tampa General Hospital. Upon completion of this elective, the training should understand the role of imaging in the diagnosis of abdominal and pelvic pathology and have a basic understanding of imaging diagnosis of abdominal and pelvic diseases on ultrasound, computed tomography, and magnetic resonance imaging.

**Evaluation**

The trainee will work closely with the attending radiologists and housestaff who will provide the assessment of performance.

This elective provides the opportunity to participate in the active "hands-on" care of plastic surgery patients including critically ill burned patients. The student is under the direct supervision by the faculty in the intensive care unit, ward, operating room. Students also participate in the outpatient follow-up care of the patients. No night call is required.

**Evaluation**

Evaluation will be completed by direct observation. There will be no examination.
MEL 7805: Trauma Surgery Acting Internship
Drs. David Ciesla, John Cha, David Lewis and John Armstrong

Students electing this course will work with the residents and faculty in the Division of Trauma in the surgical ICU, wards, ER and OR at TGH. Students will also see elective general surgery cases, attend clinic and participate in the urgent and emergent cases that are seen in consultation on the wards as well as in the ER. This includes patients with appendicitis, biliary disease, bowel obstruction GI bleeding. In addition students will participate in the care of patients that have blunt and penetrating trauma.

As a member of the trauma team, students will participate in all endeavors and become conversant in the initial assessment and resuscitation of the trauma patient as well as the critical care and post-operative aspects of the surgical patients. At least a 1-week rotation on nights will be required.

Evaluation
Students will be evaluated based on their clinical performance.

MEL 7815: Advanced Surgical Skills: Surgical Intern Preparedness
Year 4 status 1@TGH FT, 60-70 hr wk 4
Dr. Steven Goldin and the General Surgical Faculty

This is a one-month intensive intern boot camp course designed to prepare students entering a surgical residency or career. The course will consist of a series of didactic sessions involving advanced surgical topics, include the entire Web Initiatives for Surgical Education Modules (Wise-MD), and involve multiple laboratory sessions where students learn a variety of procedures in a simulated environment. These simulated experiences include understanding ATLS /ACLS principles, implementing interventions for acute life threatening disorders, placement of central venous and pulmonary artery catheters, treatment of dysrhythmias, the Fundamental s in Laparoscopic Surgery Course (a requirement for the American Board of Surgery) that includes basic laparoscopic procedures including transferring, cutting, use of tying loops, and intra and extracorporea knot tying. Students will also learn to do various intern level surgical procedures including a laparoscopic cholecystectomy, colonoscopy, and upper endoscopy using virtual reality.
simulation and 
prosection 
procedures. 
The skills 
gained in this 
course will 
allow our 
students to 
have a clear 
advantage 
over other 
students with 
regards to 
managing 
patients on 
the floor and

preparing 
them to work 
in the 
operating 
room.

Objectives

1. Complete 
common 
surgical 
procedures 
and 
assess 
surgical 
skills and 
prosections.
2. Development and understanding of the etiology, pathology, genetics, and diagnostic signs used to diagnose genetic traits and traits.
Students will be evaluated based on laboratory performance, a final simulation exam, and attendance. Students will receive feedback at the midpoint of the rotation in order to identify any areas at risk for failure and areas for improvement. At the end of the rotation, a summative evaluation will be submitted with each student’s grade.

This elective is NOT available to visiting students.
This elective will provide the student with the opportunity to function as a sub-intern. Students will assist with the work up, operative and postoperative management of a range of clinical problems involved in the practice of pediatric surgery. In addition, students will take direction from the attending and work closely with the general surgical residents rotating through the Pediatric Surgical Service. This surgical elective will be conducted at The Tampa General Hospital and will include attending related conferences at The College of Medicine. Night duty will be on an on call basis in association with the residents rotating through the service.

Objectives

The objective of this course is a broad exposure to pediatric surgery. This will involve hands on care of the pediatric surgical patients under close supervision of both the resident and attending. In addition, participation in conferences, didactic lectures, and other teaching opportunities will be available.

Evaluation
Students will be evaluated based on ward performance.

MEL 7819:
Surgical Transplant Elective
Dr. Victor Bowers and Faculty

Students will work under the direct supervision of the Director of Transplant Surgery, LifeLink Transplantation Institute, Inc. They will gain insight and experience in the area of transplantation immunology tissue typing and the concepts of histocompatibility antigens.

This elective is designed to offer students active participation in organ procurement, the harvesting and preservation of kidneys and livers, and an understanding of the role of the organ sharing networks.

Students will be directly involved with the evaluation and work up of possible renal and liver transplant recipients, observe surgery, and play an active role in the postoperative management of transplant patients, which includes the identification, management and treatment of infections, and rejection complications.
Students will receive an overview of all aspects involved in liver and renal transplantation from donor identification through clinical transplantation and long term follow up.

**Evaluation**

Students will be evaluated based on their ward performance.

This is a clinical rotation that includes graded responsibility, as well as regular formal instruction in techniques of management of critical surgical illness. Students selecting this course are assigned a full time, co management role in the 11 bed Surgical Intensive Care Unit of the Bay Pines Veteran's Administration Hospital.

**Objective**
The objectives of the course are to develop an understanding of common surgical complications, preoperative preparation of the complex surgical patient, and practical application of hemodynamic monitoring. Students will learn about pulmonary artery catheterization, placement of central venous catheters, and modalities of parenteral and enteral nutrition. They will also gain an understanding of the acute phase response patients undergo with respect to their disease processes and surgical procedures with an emphasis on fluid and electrolyte balance.

**Evaluation**

Students will be evaluated based on their ward performance.

Students will be evaluated based on their ward performance and oral examination.
This elective is designed to allow students an exposure to research in vascular diagnosis and fundamental problems in vascular disease. Current ongoing research projects include in-situ replacement of infected vascular prostheses, immune-response to bacterial biofilms, hemodynamic factors modulating myointimal hyperplasia, and non-invasive bypass graft surveillance. This elective provides the student with an opportunity to have hands-on experience with instrumentation that map arterial and venous flow fields, participate in surgical procedures, and analyze the outcome of arterial reconstructions. Vascular research experience provides further development of surgical techniques and diagnostic skills as well as in-depth exposure to academic medicine. Students will be expected to read and participate in one area of research with effort rewarded by co-authorship on any data they generate that is published.

Evaluation
Students will be evaluated based on their laboratory performance and an oral presentation at the Vascular Surgery Conference.

**Pre-requisites**

BCC 7164 Surgical Care Clerkship

This elective is NOT available to visiting students.

**MEL 8811:**
General Surgery Acting Internship
Dr. Steven Goldin and General Surgery Faculty

Students may choose to participate on the Gold Surgery, Colorectal Surgery, JAHVA or BPVAH services. On these services, the student is expected to function as an intern at VAH, in the role of "intern." Responsibility will vary with the ability of each student. The elective will afford the students an in-depth experience in total patient management so that these responsibilities may be assumed with confidence in the internship year.

Attendance will be required at Grand Rounds, Morbidity, and Mortality Conference, and various other conferences. The student will perform histories and physical examinations, write all progress notes, and write orders for diagnostic and therapeutic intervention with supervision from house staff. Students will be encouraged to perform procedures such as CVP placement, invasive monitoring line placement, chest tube placement, etc with appropriate supervision. Operating room experience will also be extensive.

**Evaluation**

Students will be evaluated based on their ward performance.

**Pre-requisites**

BCC 7164 Surgical Care Clerkship & BCC 7144 Integrated Internal Medicine-Pediatrics Clerkship
Objective

The objective of this course is to help the student understand the scientific basis and general principles of research in the field of surgery.

An Independent Study Application MUST have signatures of BOTH the elective faculty preceptor and Surgery Education Coordinator at least one month prior to the start of the elective. This form can be obtained from the Registrar's office.

Pre-requisites

BCC 7164 Surgical Care Clerkship

This elective is NOT available to visiting students.

MEL 7822:
Clinical Urology Elective
Dr. Jorge Lockhart and Faculty

For additional information regarding this elective, please contact Edyth Roberts at (813) 259-8581 or erobe@health.usf.edu.

The Department of Urology, at the University of South Florida provides comprehensive urologic patient-oriented care with concern for quality of life and education. Physicians and staff provide state-of-the-art multidisciplinary patient care while striving to blend compassion, technology and advanced techniques.
The elective is an introduction to basic urology with emphasis on clinical service designed to provide a background for students planning to practice in related specialties. Students will be assigned to preceptors and rotate at the H. Lee Moffitt Cancer Center and the Tampa General Hospital. The clinic rotations will be designed at a level of learning for medical students. During the rotation, students will be supervised and instructed on a one-to-one basis by their preceptor(s), fellows, residents, and other qualified faculty responsible for teaching and evaluation.
Students will participate in the pre-operative work-up of urological patients. Students will learn from attending faculty and residents alike. Participation in cystoscopy and surgical procedures will form a significant part of the experience provided on this rotation. Students will follow patients to the operating room; assist in the procedures carried out, and will share in the responsibilities for post-operative care. Participation in the evaluation and treatment of common urological problems in the outpatient clinics will give the student an overall understanding of office urology. Students will attend and participate in all conferences and activities of the Urology Service and perform such activities assigned as a part of their added learning experience. Students will present a case to the weekly conference for urology residents and faculty during the last week of the rotation.

Objectives
The objectives of this rotation are to provide exposure to the field of Urology as a background for practice in other areas and to offer closer acquaintance with this field for those considering it for possible future specialization.

**Evaluation**

Students will be evaluated based on their ward performance and oral examination.
